diagnostic imaging in H&N tumours

P

Prof. Dr. Bernhard Schuknecht, Medizinisch Radiologisches Institut Zürich (MRI)
bschuknecht@mri-roentgen.ch

PD Dr. Gerhard F. Huber, USZ
gerry.huber@usz.ch

Order of „business“

- **morphologic and «advanced " diagnostic imaging**
- supra- & infrahyoid pharygeal- and neck-spaces !

locations

oral cavity

oropharynx

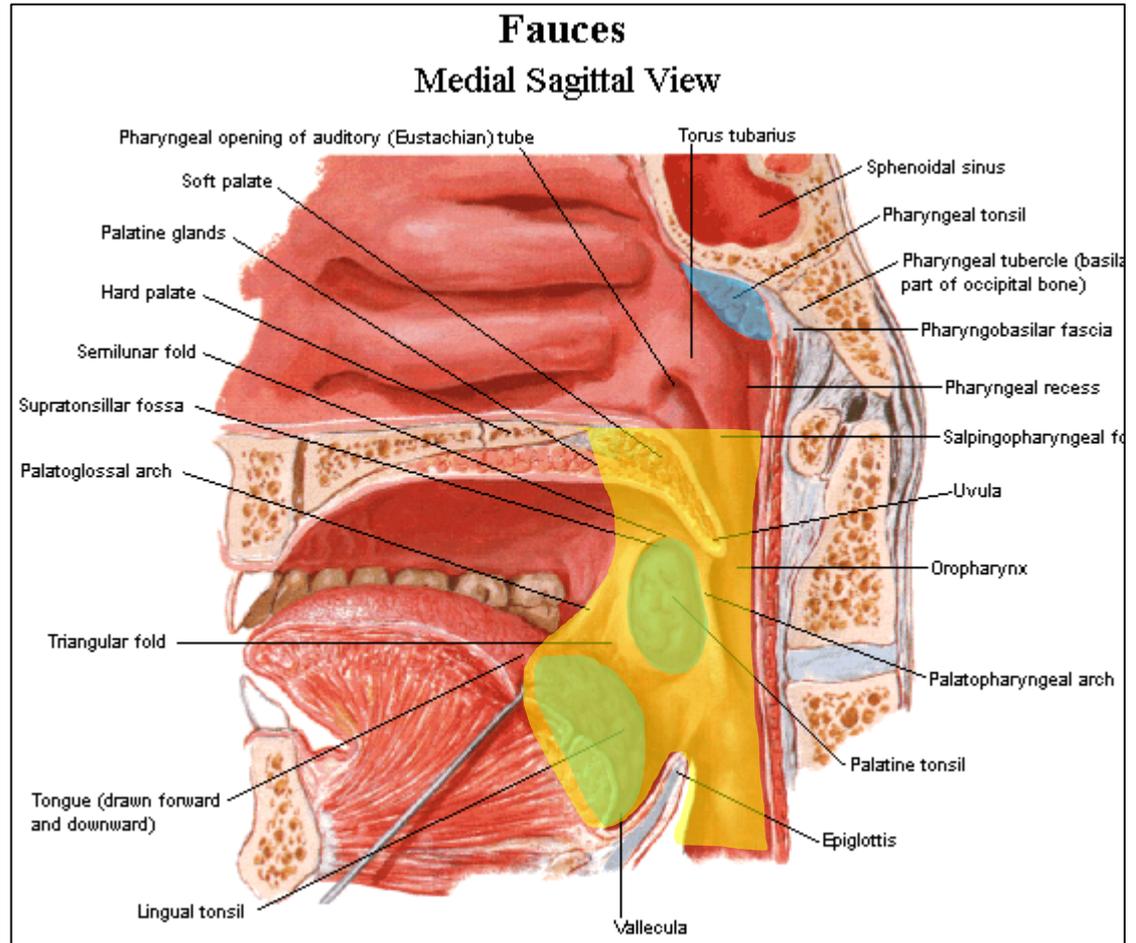

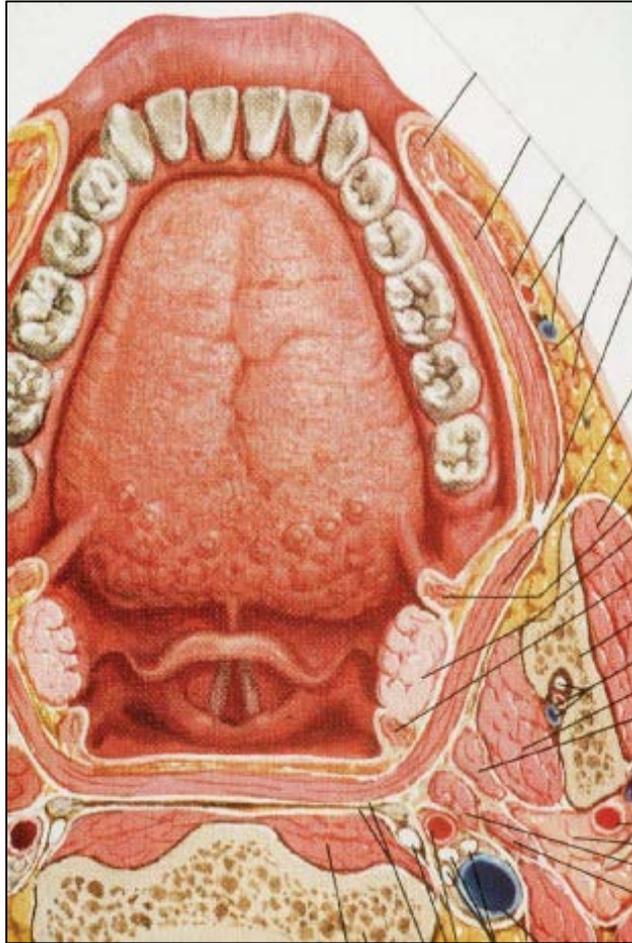

larynx

hypopharynx

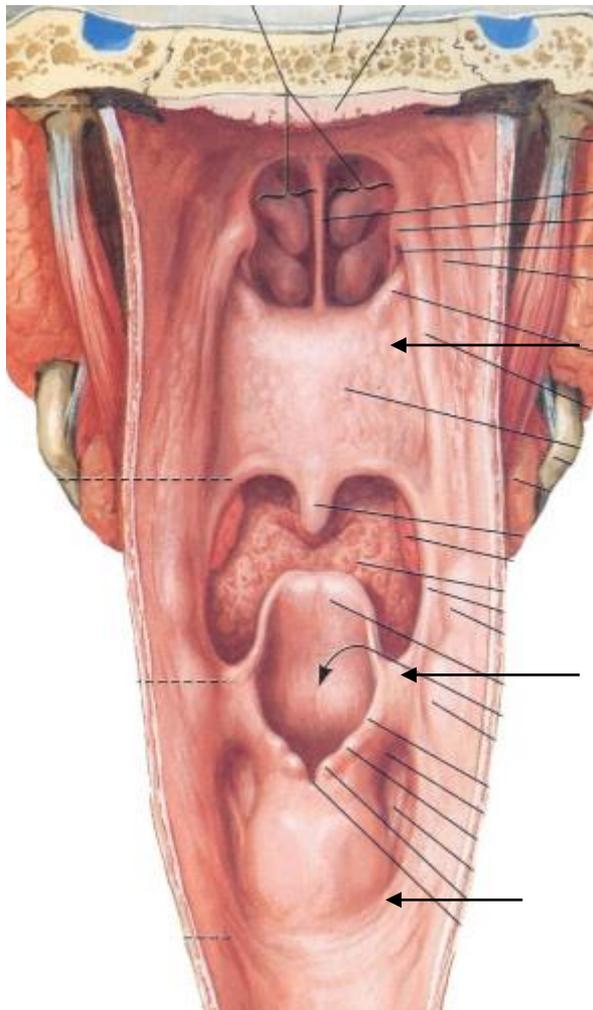

(nasopharynx)

- salivary glands => parotid gland
- parapharyngeal space
- masticator space
- carotid space
- perineural spread

anatomy of the oral cavity and oropharynx

anatomic division of the pharynx naso-(epi), meso- (oro), hypopharynx

nasopharynx

skull base – soft palate

oropharynx

soft palate – pharyngo-epi-
glottic fold

Hypopharynx

- cricopharyngeus m.

deep cervical fascia

= key for understanding H&N
Anatomy

deep cervical fascia →

- superficial layer
- middle
- deep

divides neck in
spaces

suprahyoidal ↔ infrahyoidal

fasciae: probability of different tumours

relevance for surgical treatment?

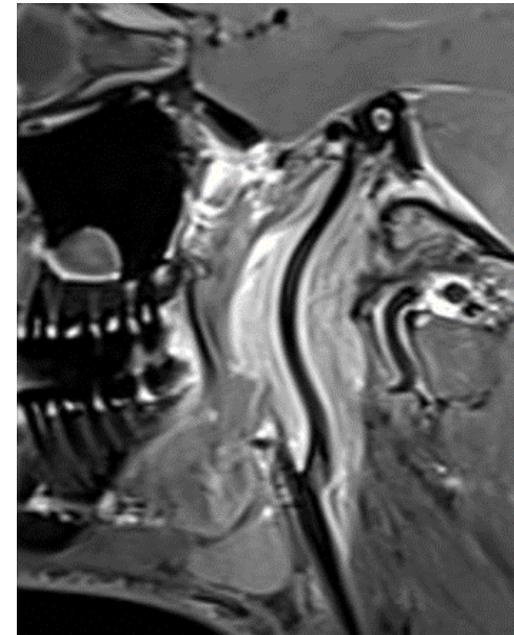

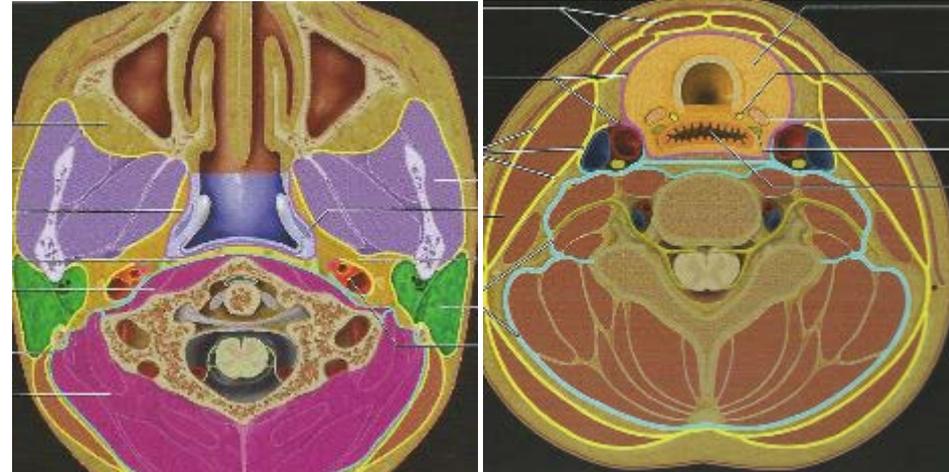

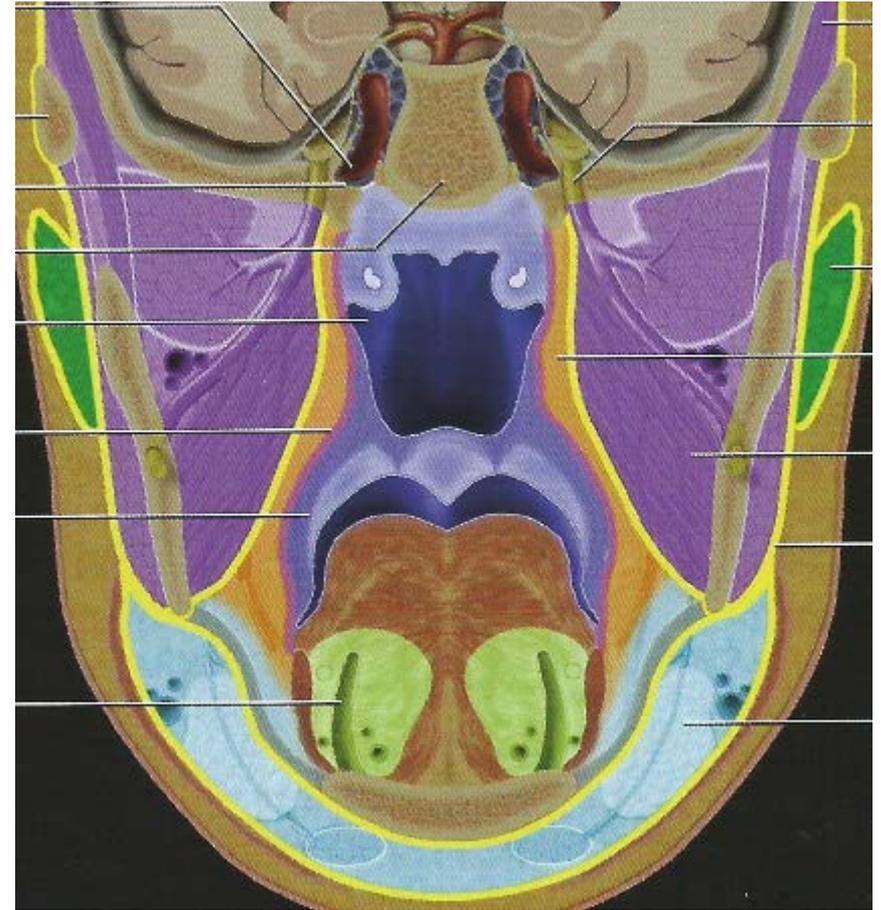

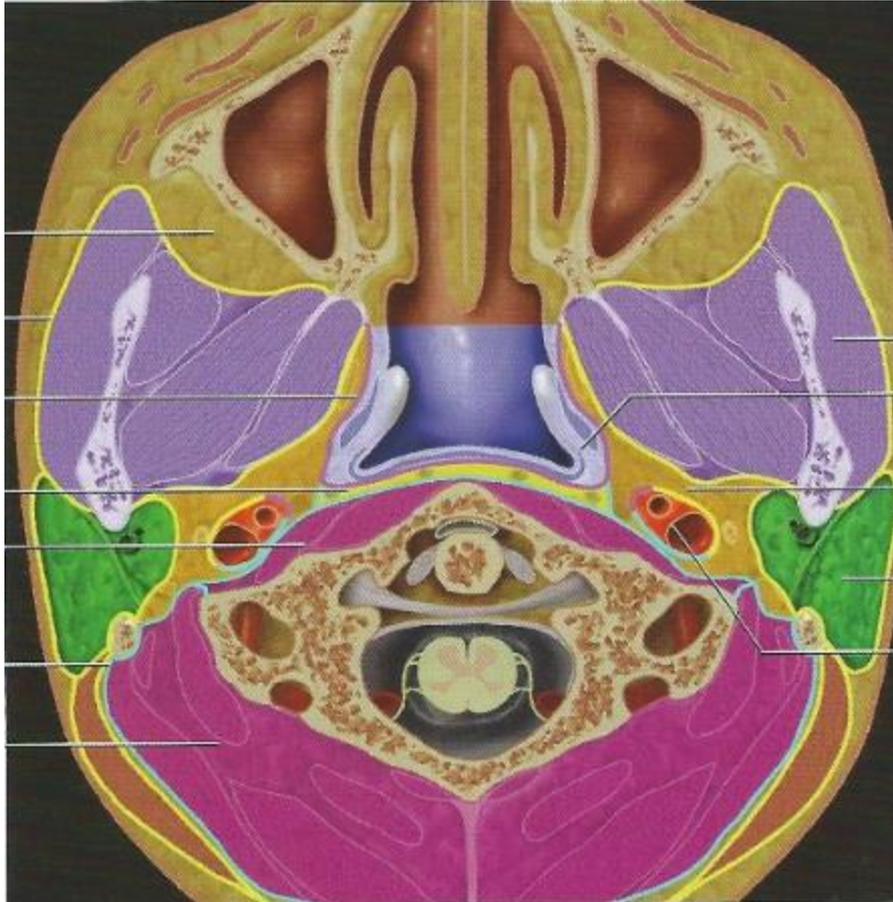

Fig. Harnsberger Ed. Diagnostic Imaging Head and Neck 2nd ed : Amirsys 2011

suprahyoidal

superficial :

parotid-, masticator-, submandibular- space, parapharyngeal- & carotid- space

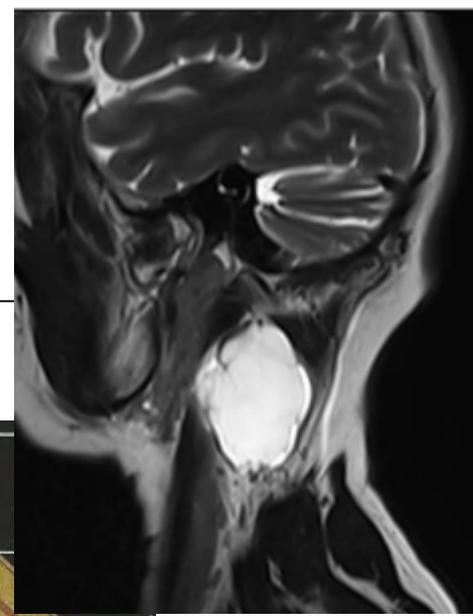

middle:

pharyngeal mucosal space, retropharyngeal space

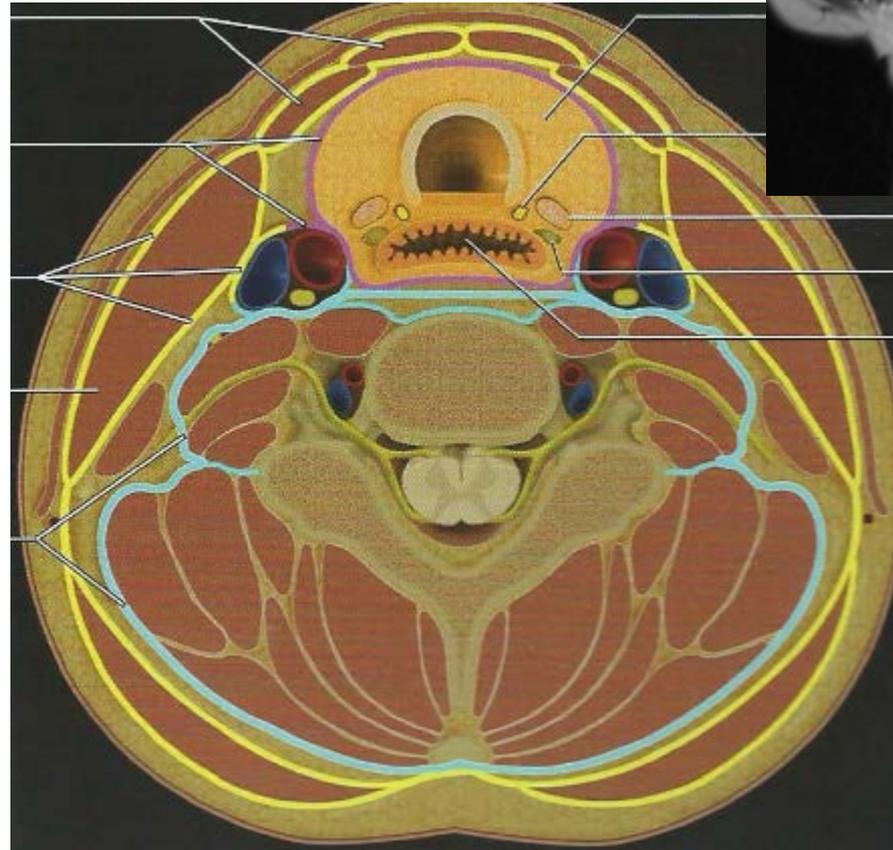

depp:

retropharyngeal space, prevertebral space

infrahyoidal

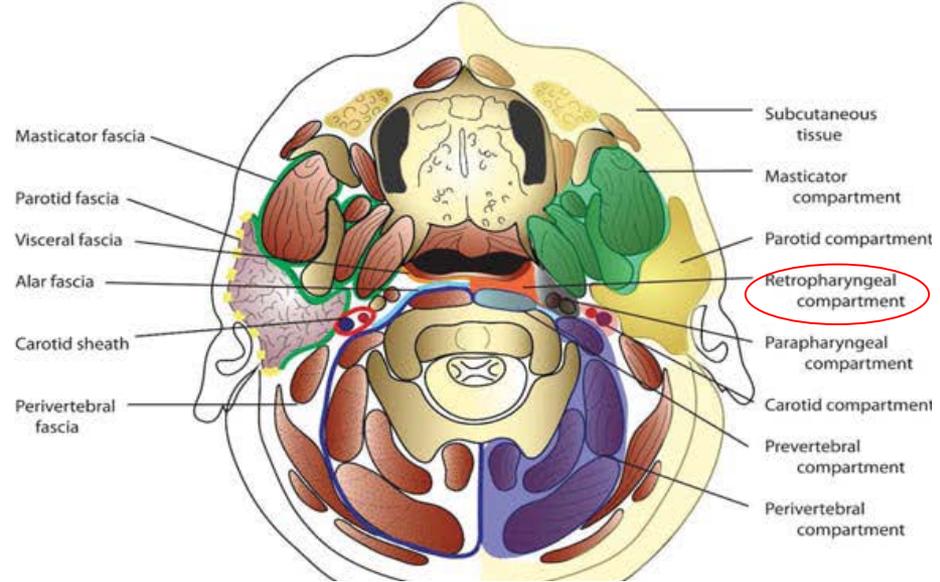

- **infrahyoidal**
 - visceral space
 - anterior cervical space
- **supra- /infrahyoidal**
 - carotid space
 - retropharyngeal / «danger» space
 - pre- (peri-)vertebral space
 - posterior cervical space

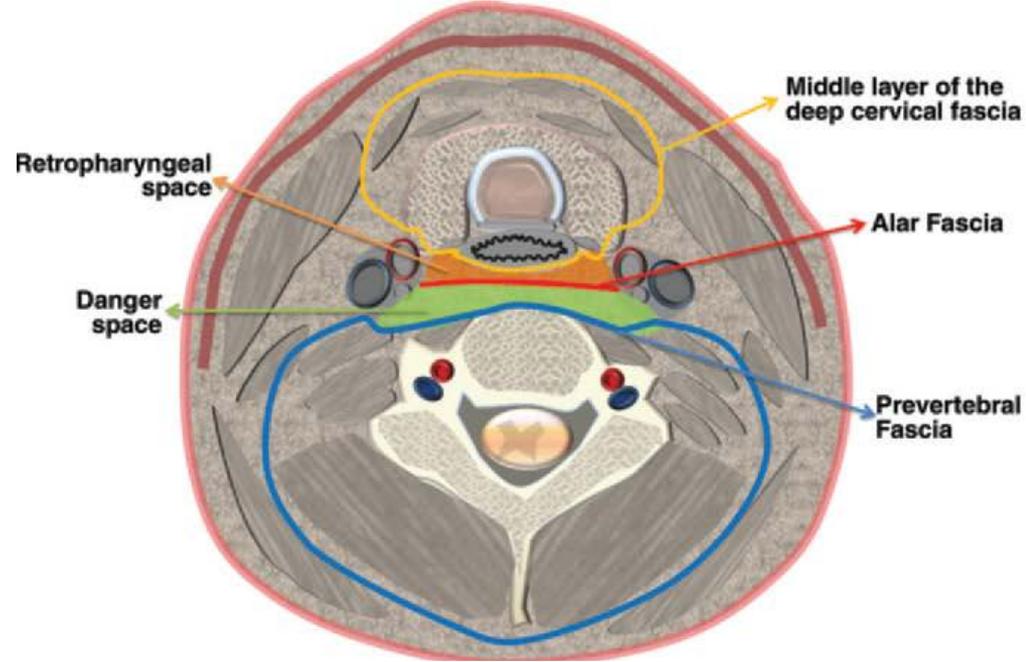

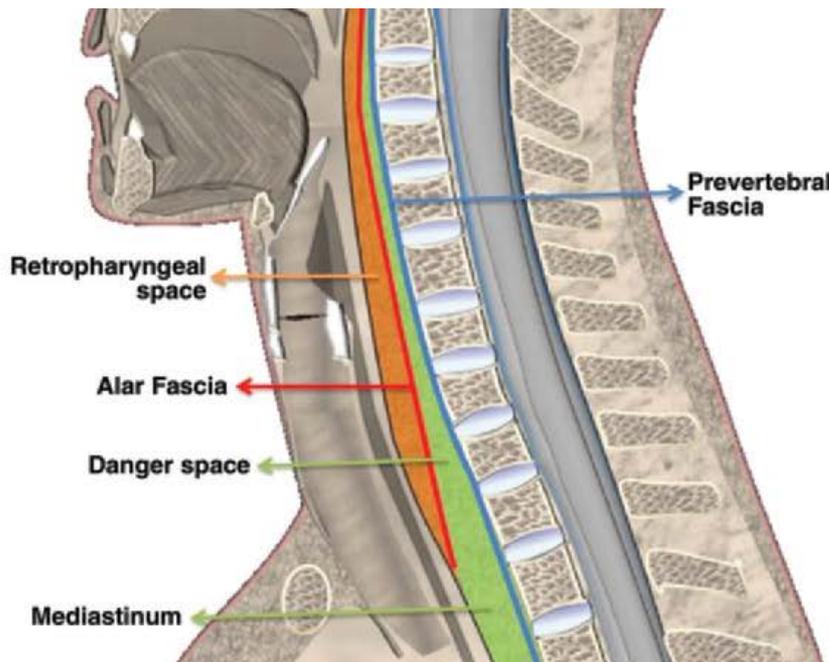

Spaces ?

Retropharyngeal + danger space
= *Retropharyngeal compartment*

Guidera AK et al. Head and neck fascia and compartments: No space for spaces. HEAD & NECK—DOI 10.1002/HED 2014

Katabathina V et al. Nonvascular, Nontraumatic mediastinal emergencies in adults: a comprehensive review of imaging findings. RadioGraphics 2011; 31:1141-1160

tasks of diagnostic imaging

relevant information for therapy planning

1. tumour location ?

initial starting point → e.g. tonsil vs adjacent mesopharynx

2. tumorextension ?

infiltration into deep, breaching of midline, bone- cartilage-, nerve-, vascular- involvement

3. involvement of lymph nodes?

cervical, retropharyngeal, mediastinal - fascial (parotid)

criteria - staging !

4. course during and after therapy

local, systemic, surgical

role of diagnostic imaging

different questions in different phases of treatment

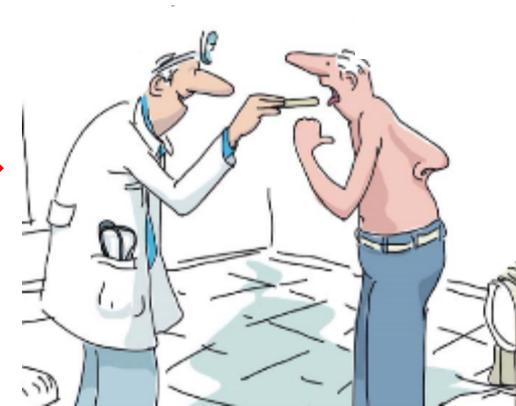

diagnosis

treatment

follow-up

Staging :

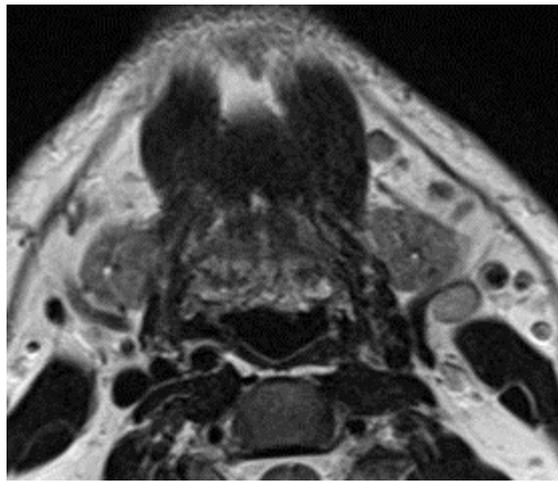

mesopharynx and oral cavity

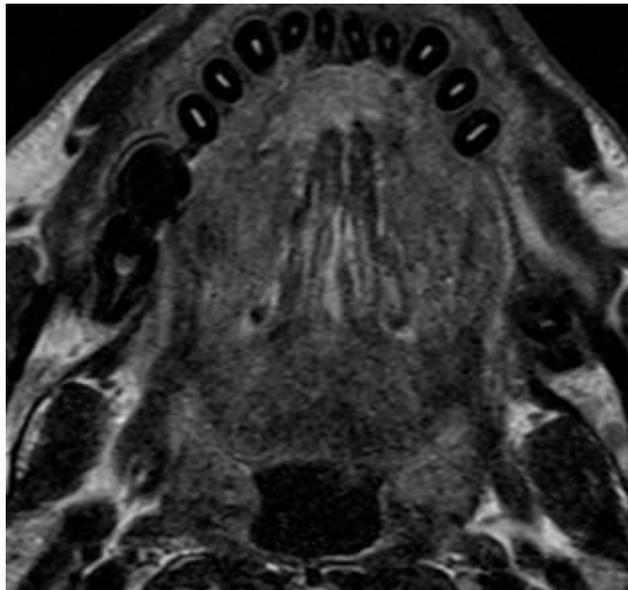

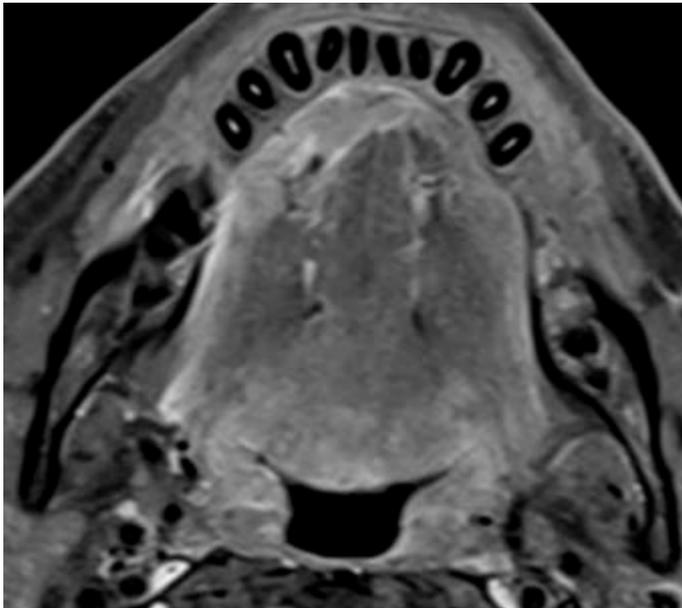

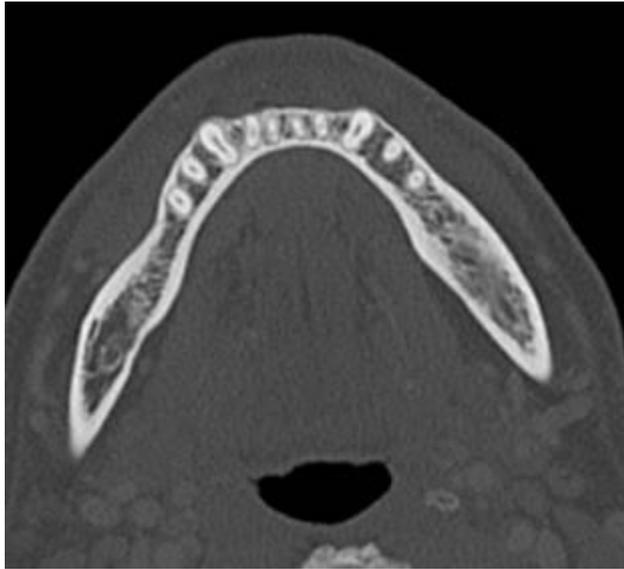

- **T1** **Tu \leq 2 cm maximum diameter**
- **T2** **Tu $>$ 2 cm \leq 4 cm maximum diameter**
- **T3** **Tu $>$ 4 cm maximum diameter**
- **T4a** **Tu infiltrating supragl. larynx, extrinsic musculature, potentially resectable**
- **T4b** **Tu infiltrating masticator space, skull base, ICA**

carcinoma of the oral cavity

- lower lip > tongue > FOM
- involvement of LN: 30-70% initially
- prognosis: ↓ anterior tw posterior
- crossing the midline
- infiltration of extrinsic tongue musculature, bone or supraglottic larynx

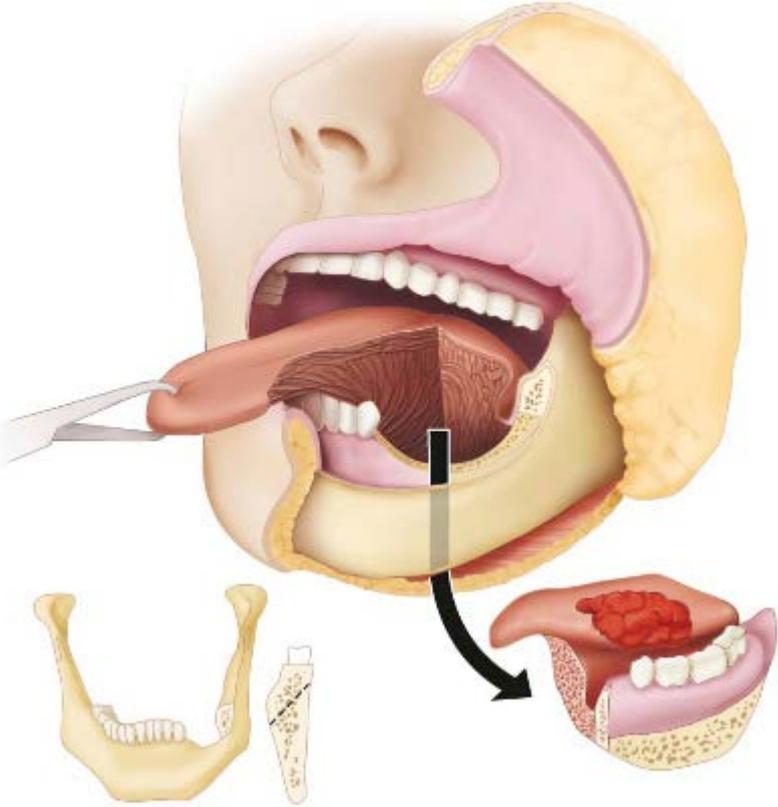

tongue cancer

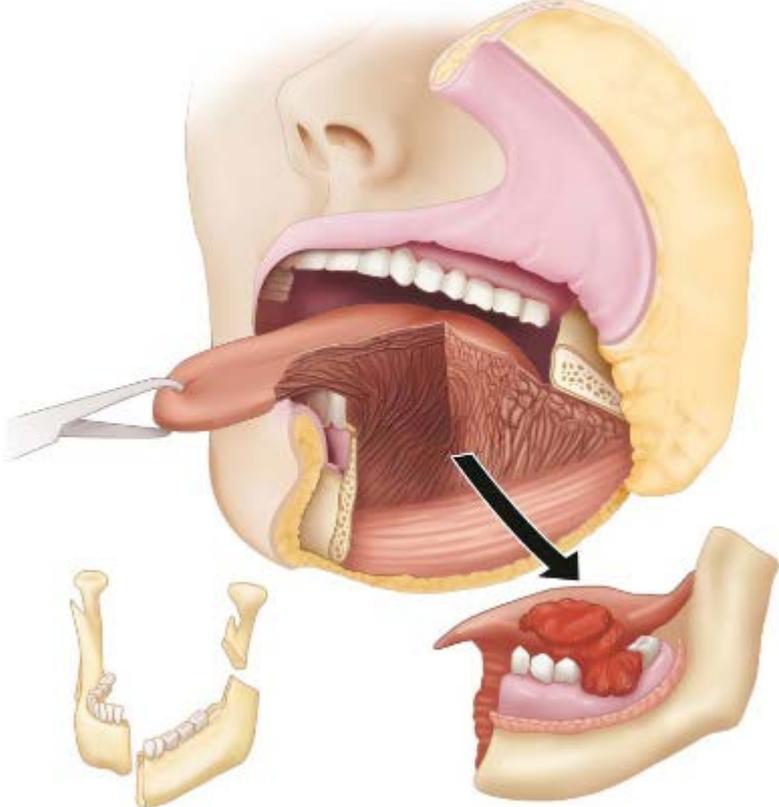

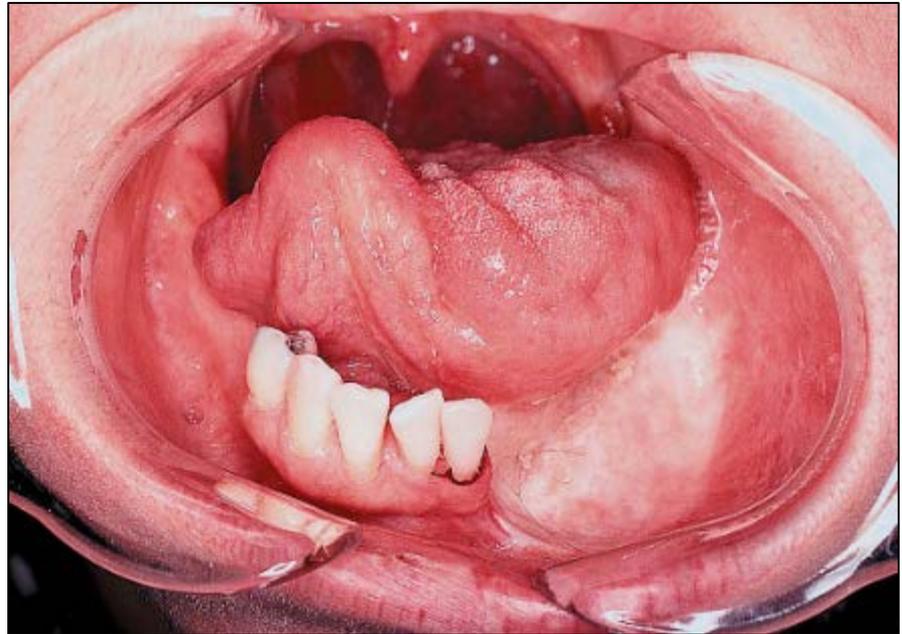

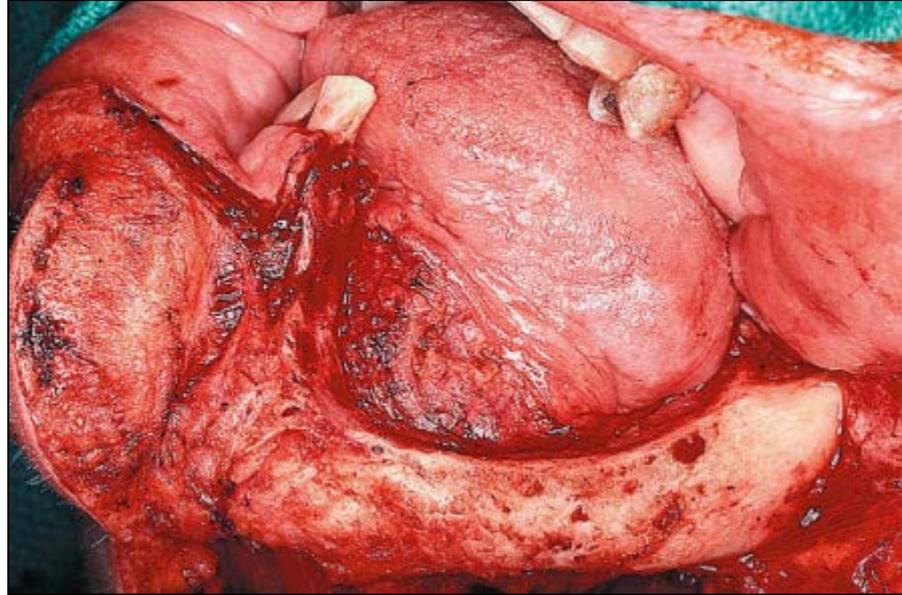

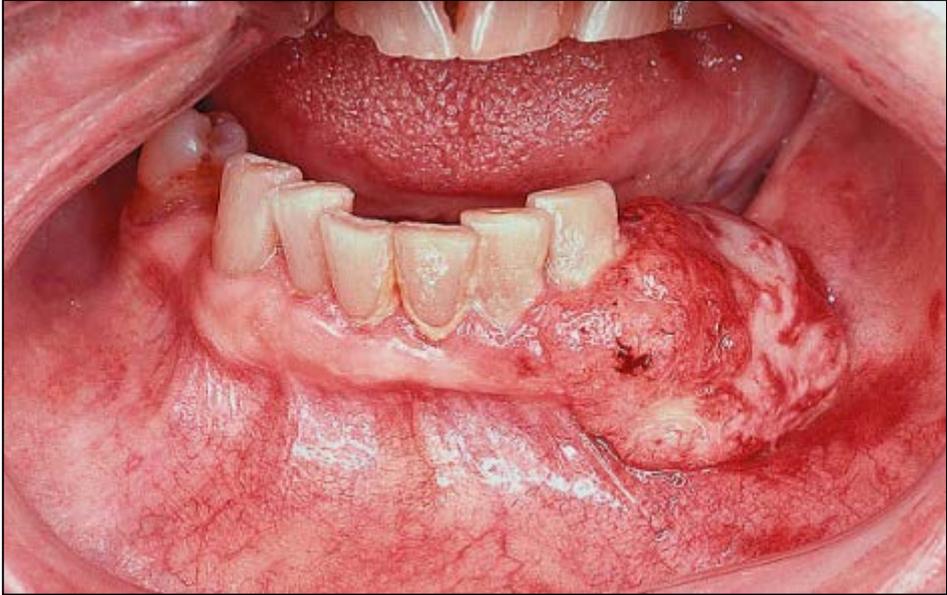

Floor of Mouth Ca
T2, N1

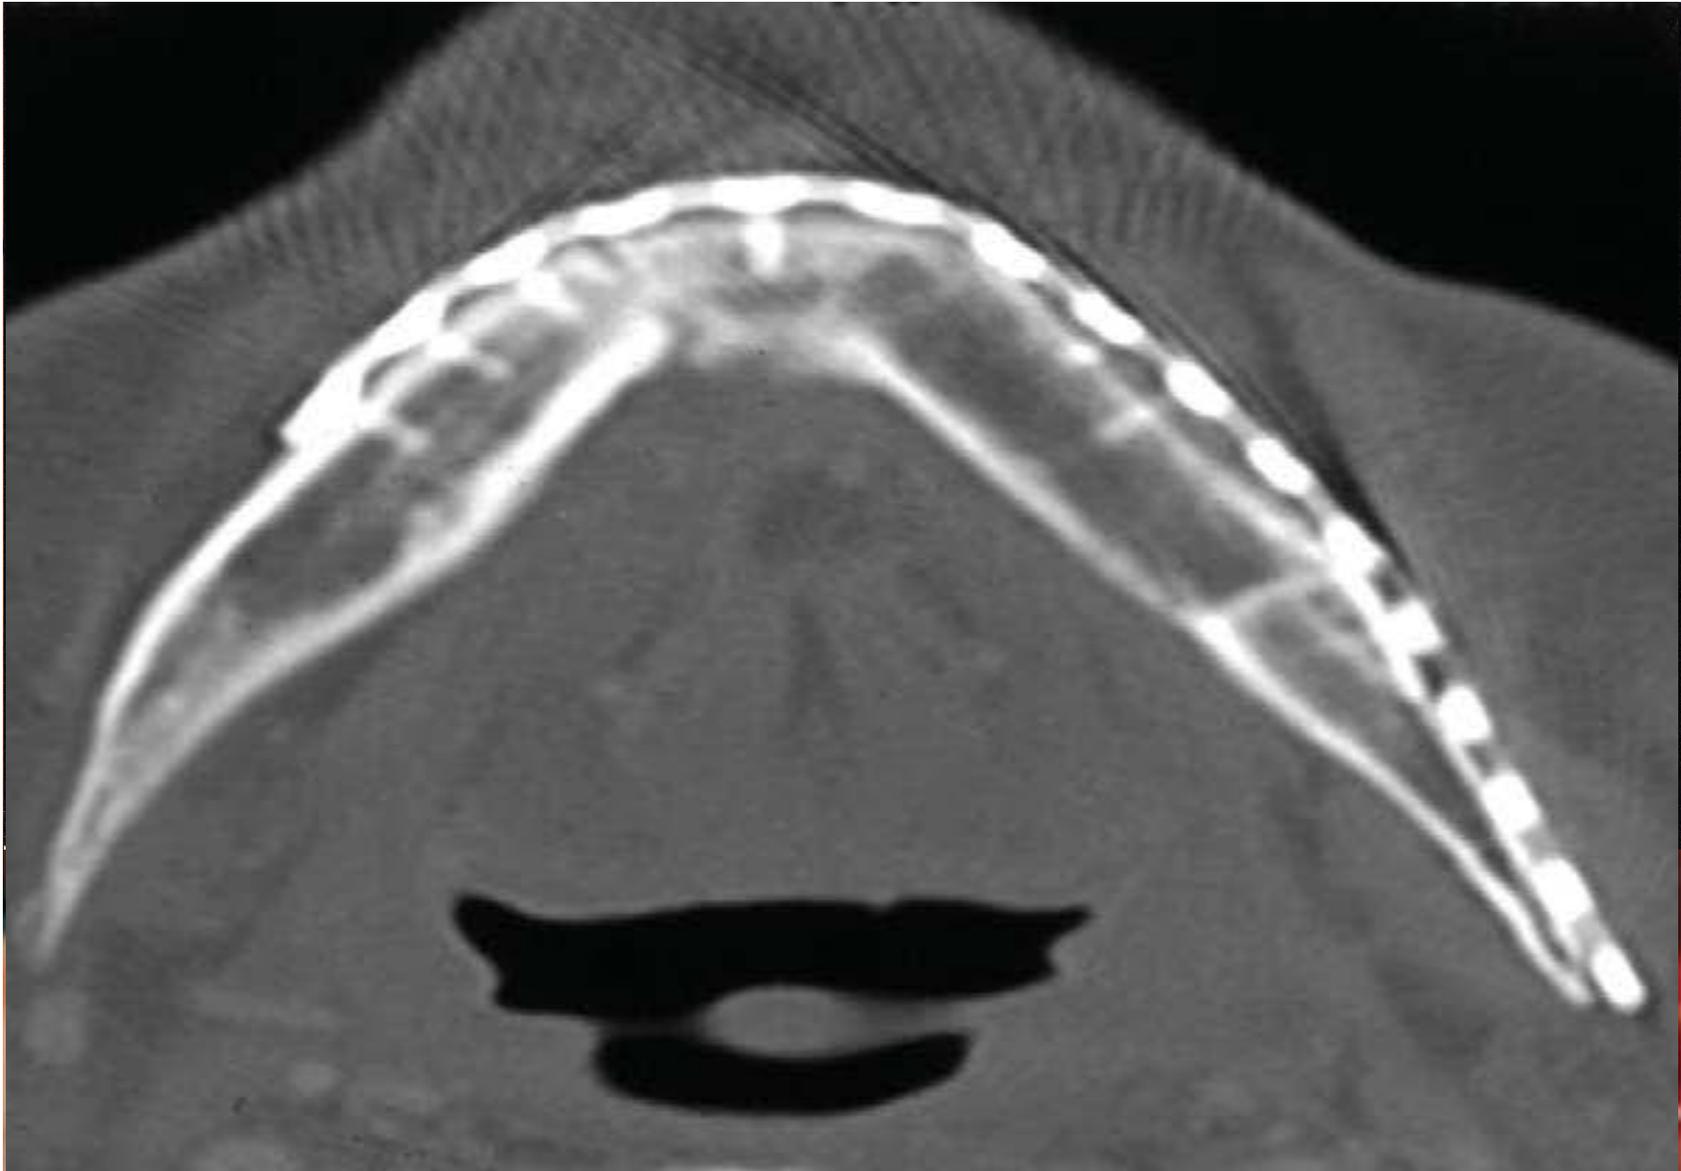

marginal mandibulectomy

segmental mandibulectomy

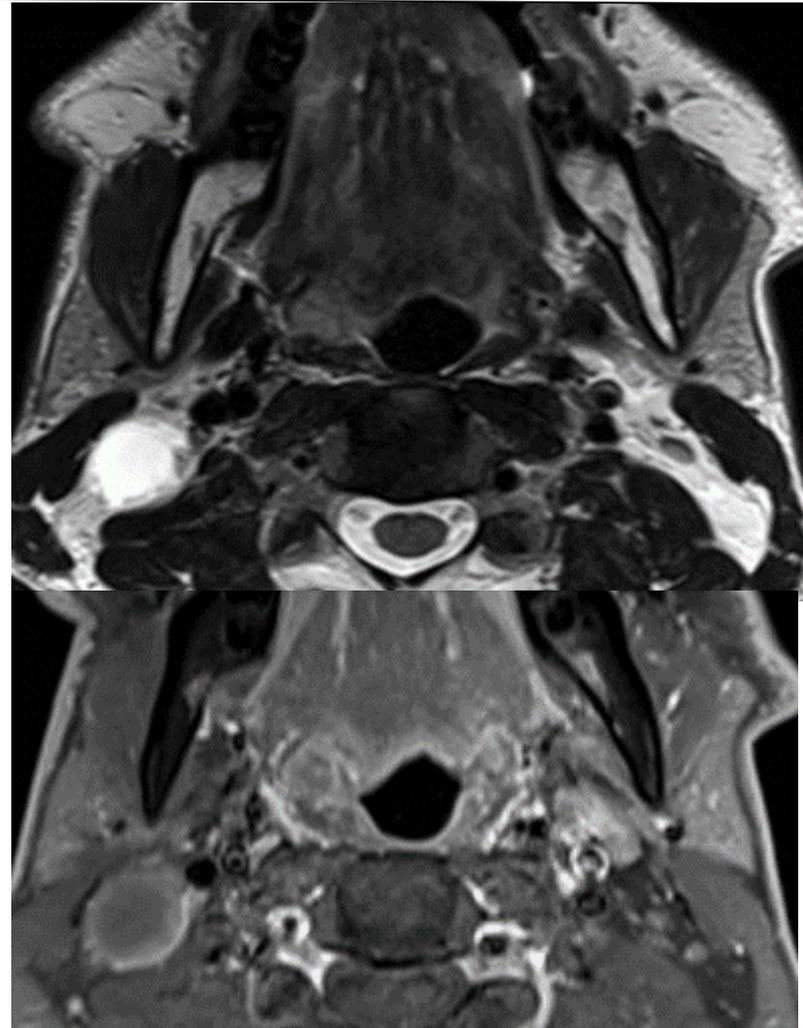

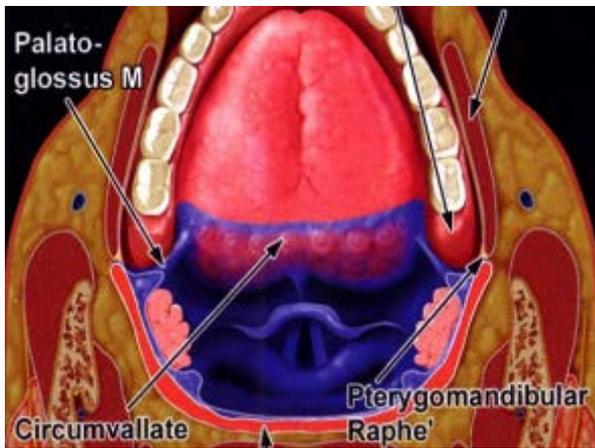

Mesopharynx

neoplasms
tonsil 50%,
base of tongue 20%,
soft palate 10%
pharyngeal wall 10%

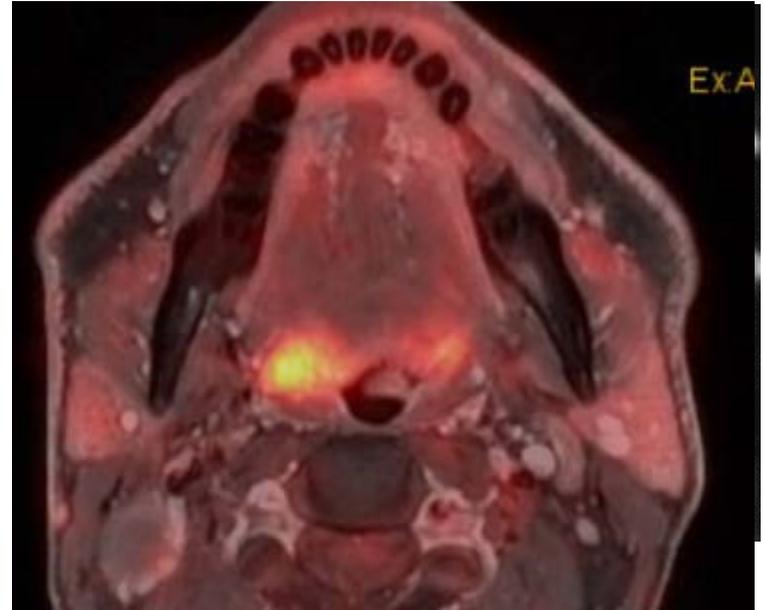

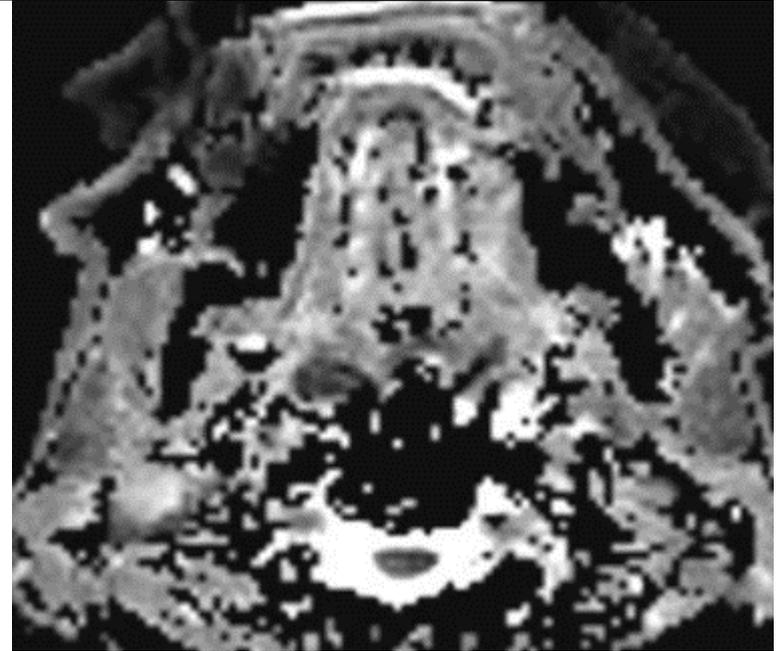

54y,m; lump on right mandibular angle, ↑ 4 weeks

Mesopharynx

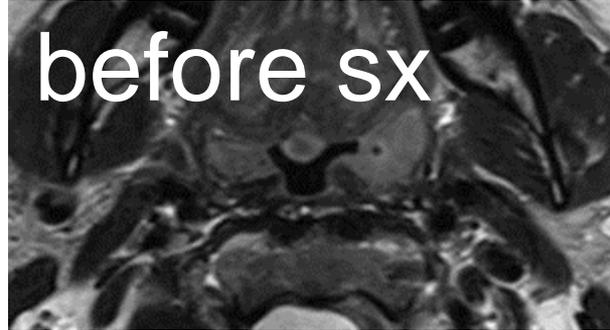

larynx ?

tonsillar-ca

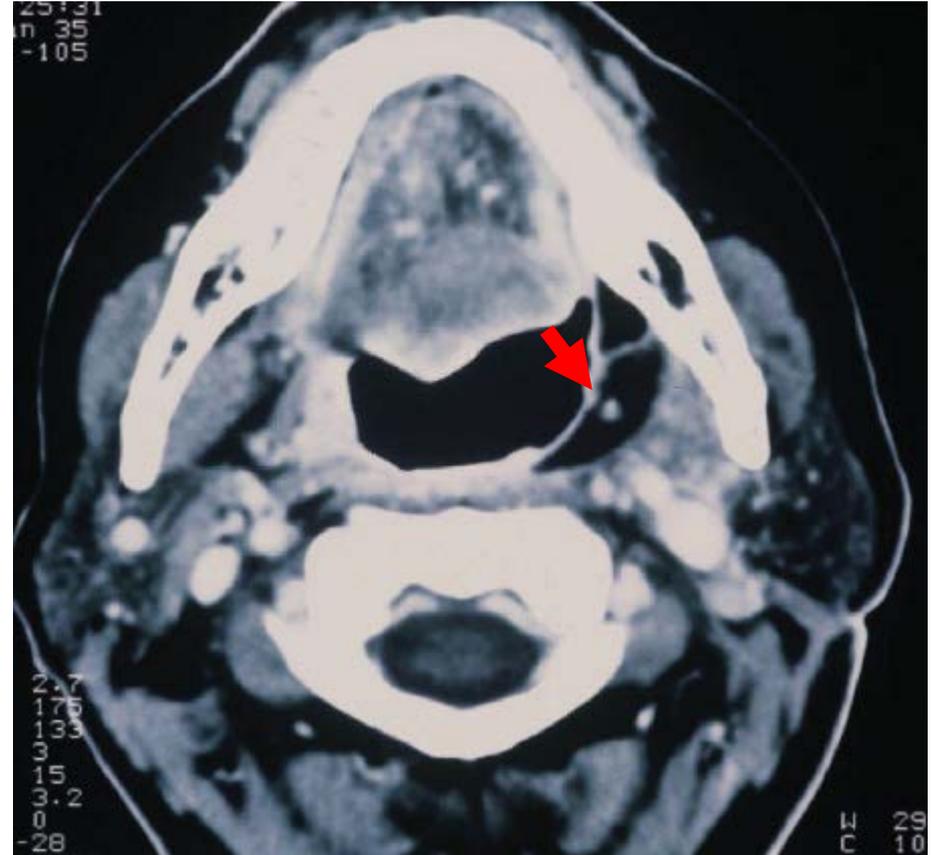

transoral tu resection,
RFFF and ND I-IV left

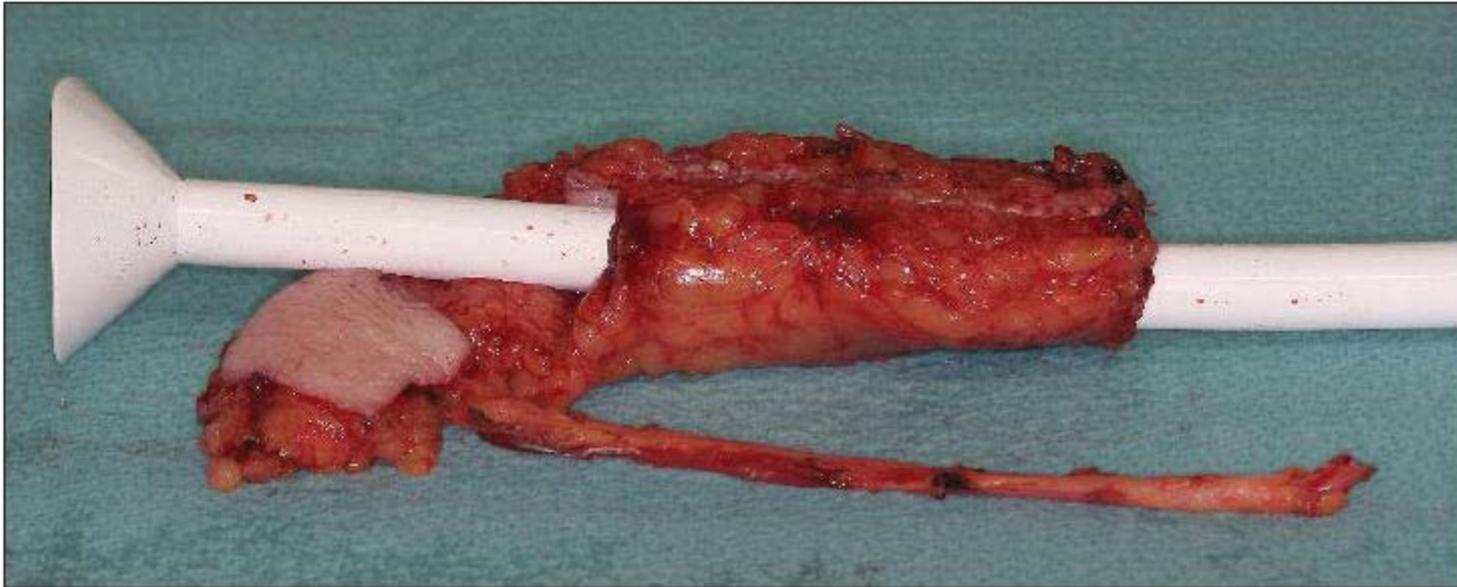

changed anatomy after sx with flap reconstruction

changed anatomy after sx with flap reconstruction

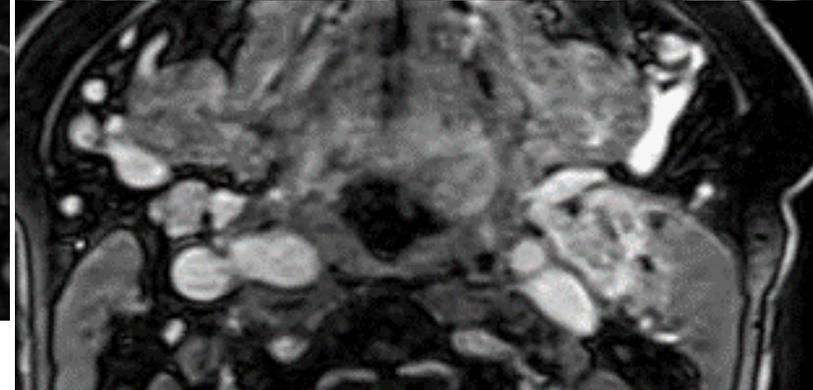

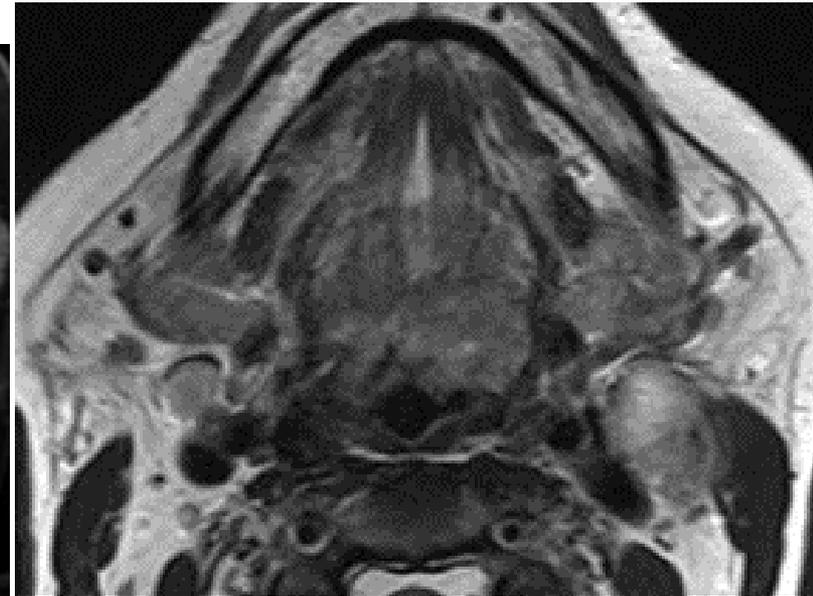

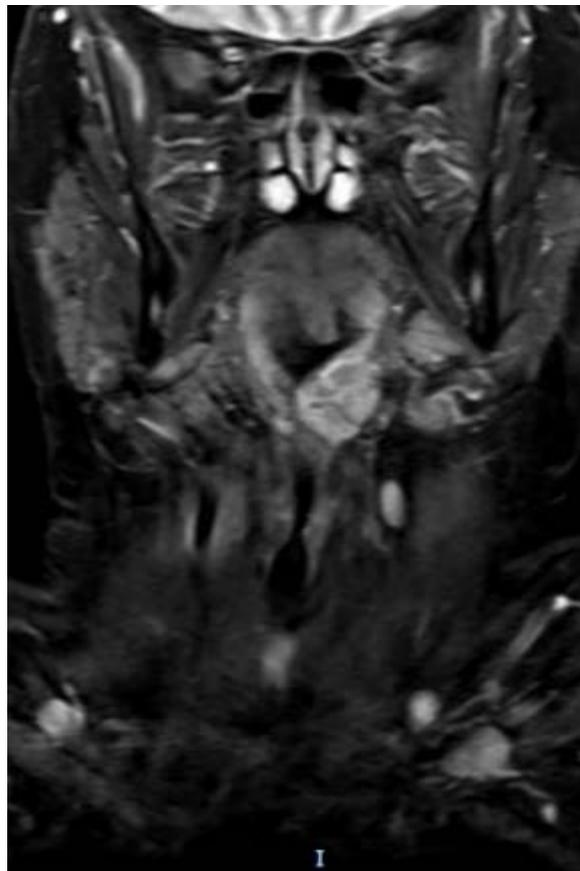

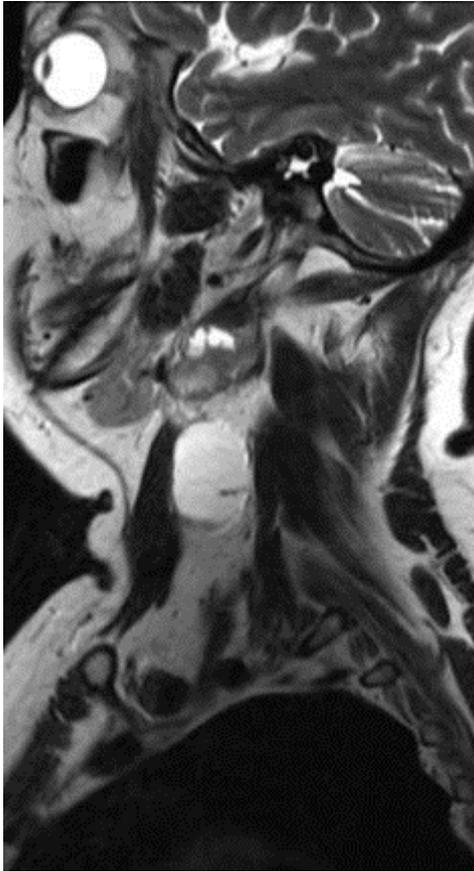

staging carcinomas of mesopharynx and oral cavity

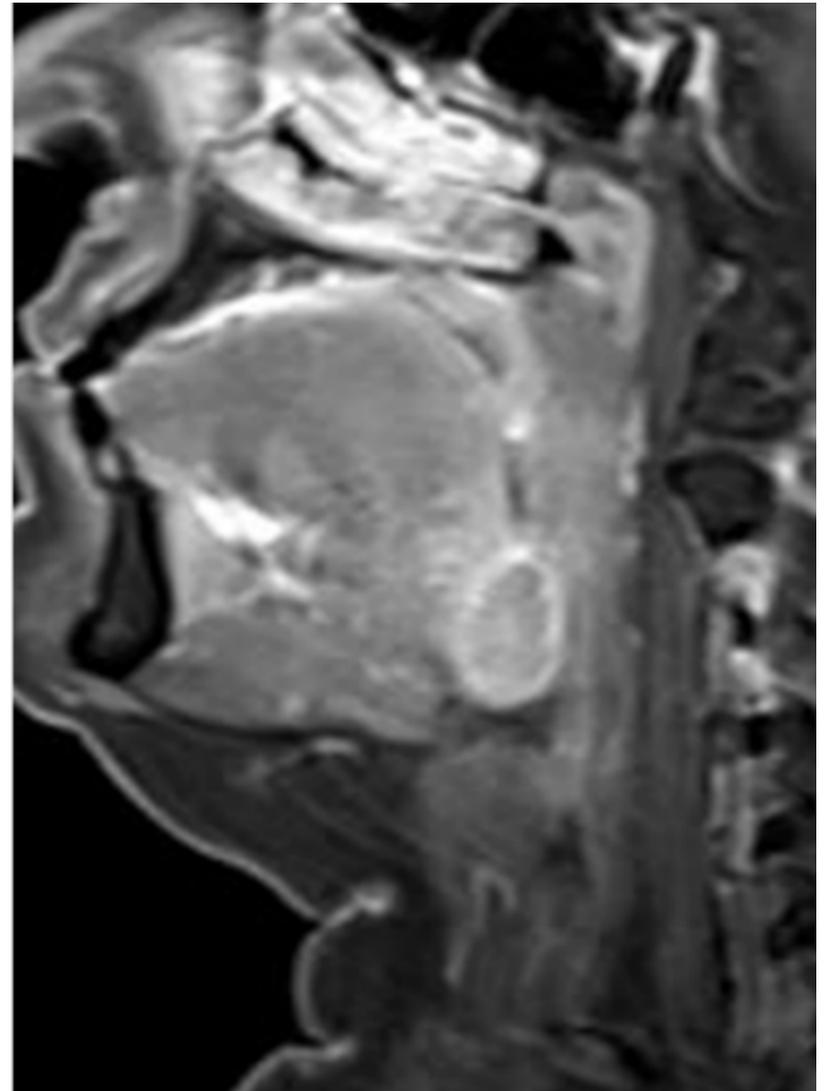

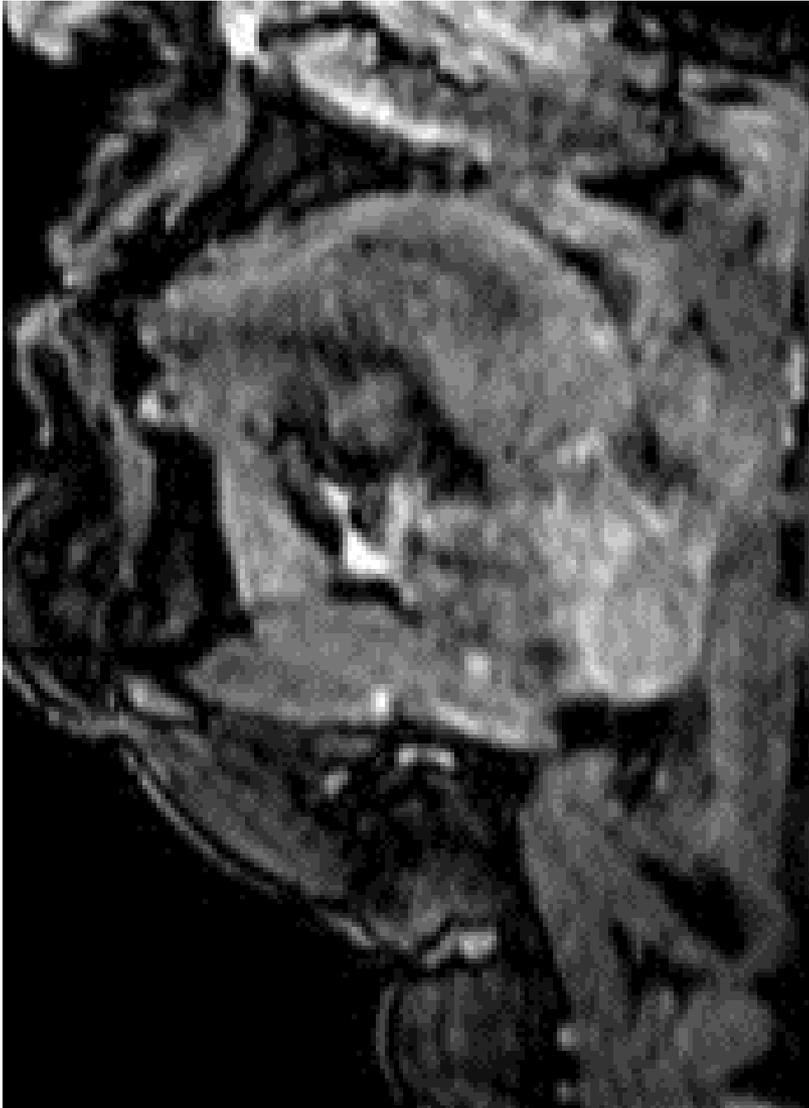

- **T1** **Tu \leq 2cm maximal extension**
- **T2** **Tu $>$ 2cm \leq 4cm maximal extension**
- **T3** **Tu $>$ 4cm maximal extension**
- **T4a** **Tu infiltrating supragl. larynx, extrinsic musc.,
potentially resectable**
- **T4b** **Tu infiltrating masticator space, skull base, ICA**

strategy of investigation: **3 planes**

1. **sag** T2, 2. **cor** STIR, 3. **ax**: T2, T1 \pm Gd,

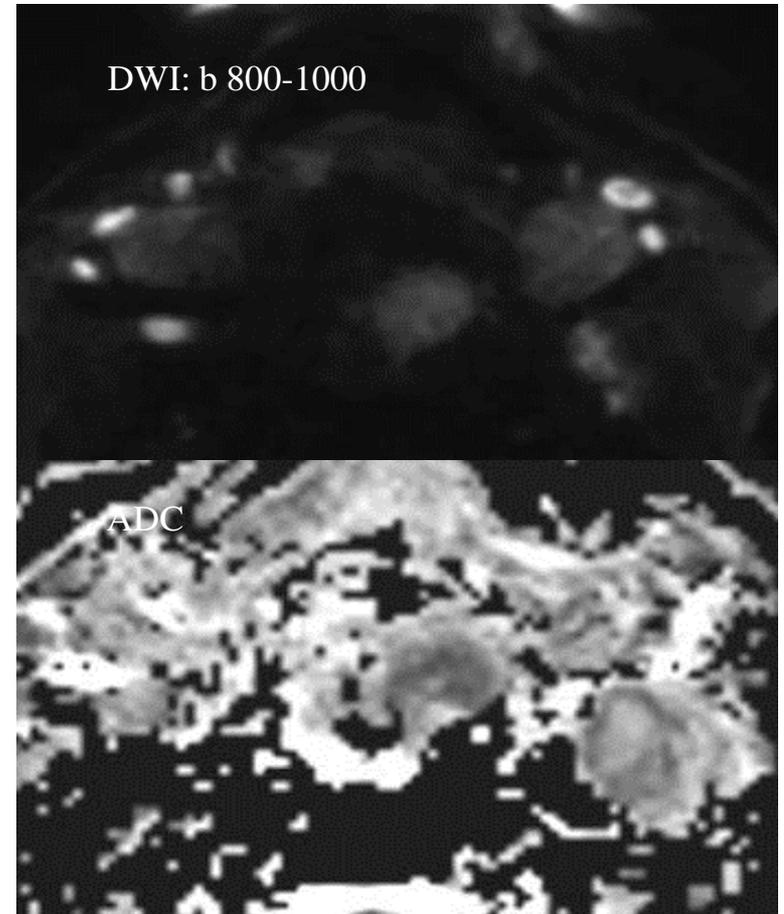

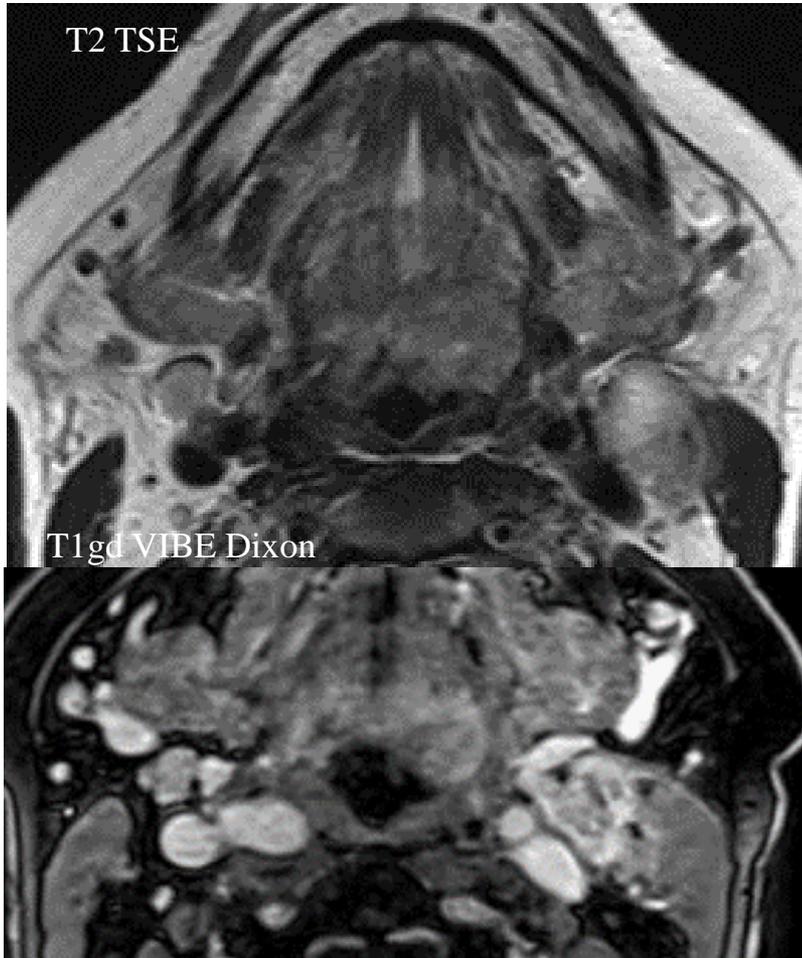

images after i.v. contrast dye **early** - late

morphology and DWI

HPV + Mesopharynx ca

“pN value > 5 for oropharyngeal cancers was associated with decreased survival”
Roberts T et al. Cancer 2016; 122:1388–1397

HPV + oropharyngeal Karzinome

HPV+ und HPV- Ca = different tumour entities

histology:

HPV+ : non-keratinizing, ∞ mitotic fig. + necrosis

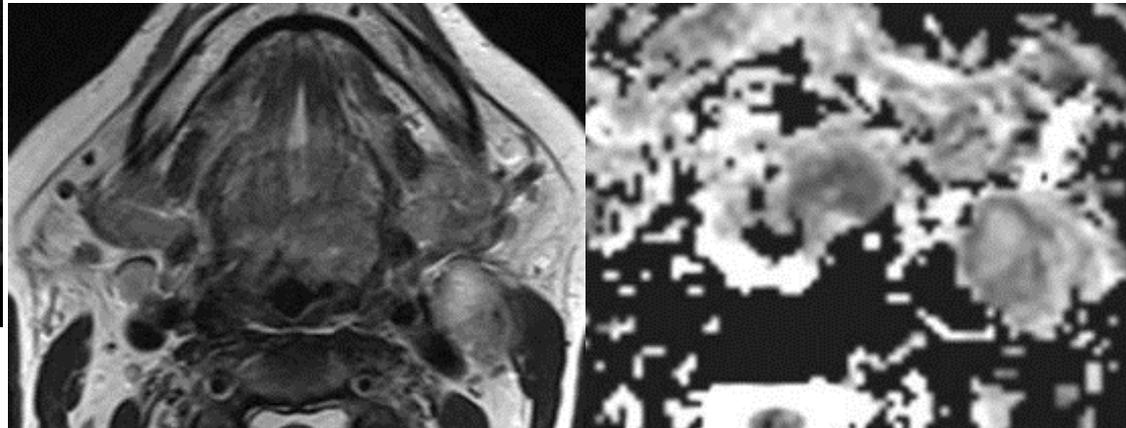

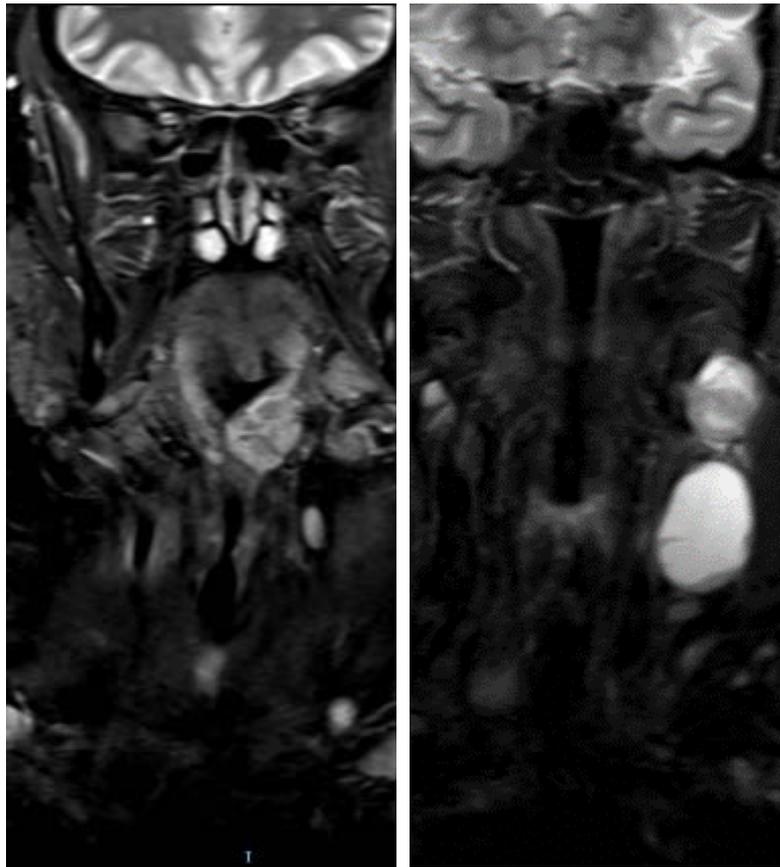

HPV - : large polygonal keratinizing cells

imaging:

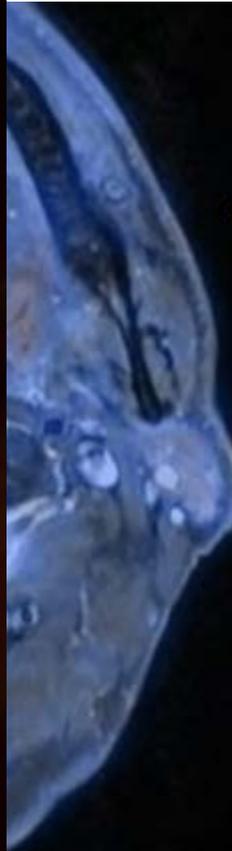

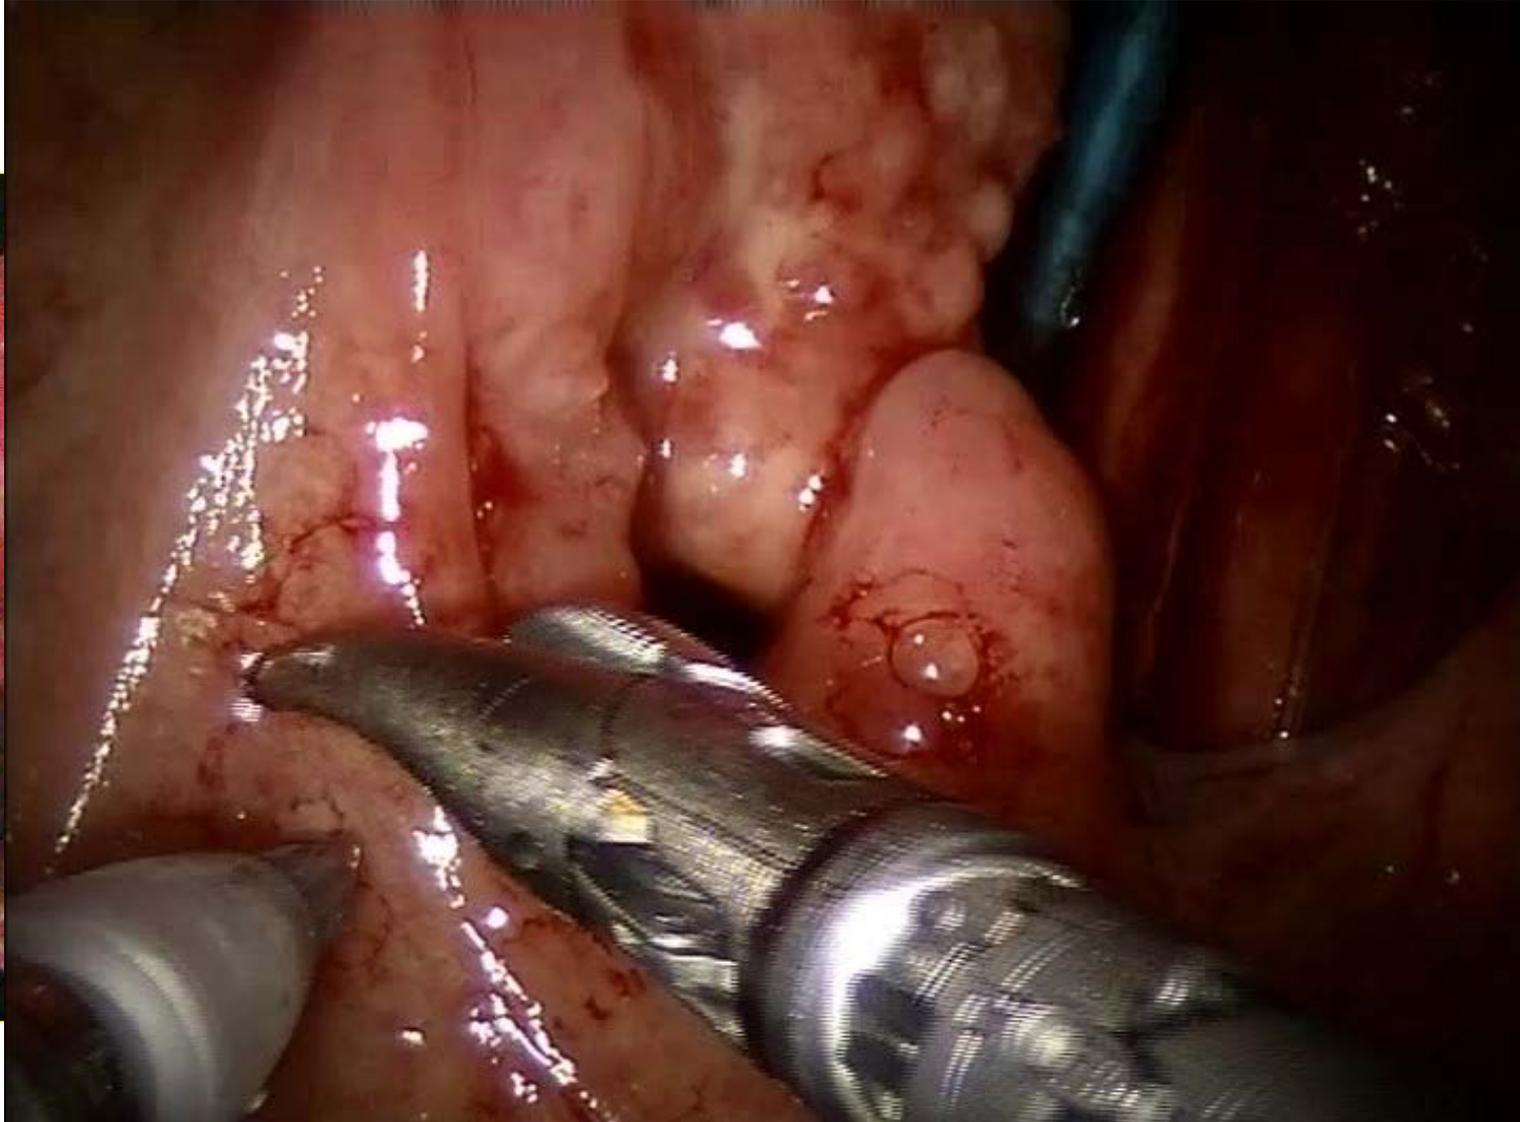

HPV+ : exophytic, KD \uparrow + clearly delineated, frequent cystic metastatic lymph nodes (36%)

HPV - : infiltrating, KD +/-, blurred delineation, cystic in rare (9%)

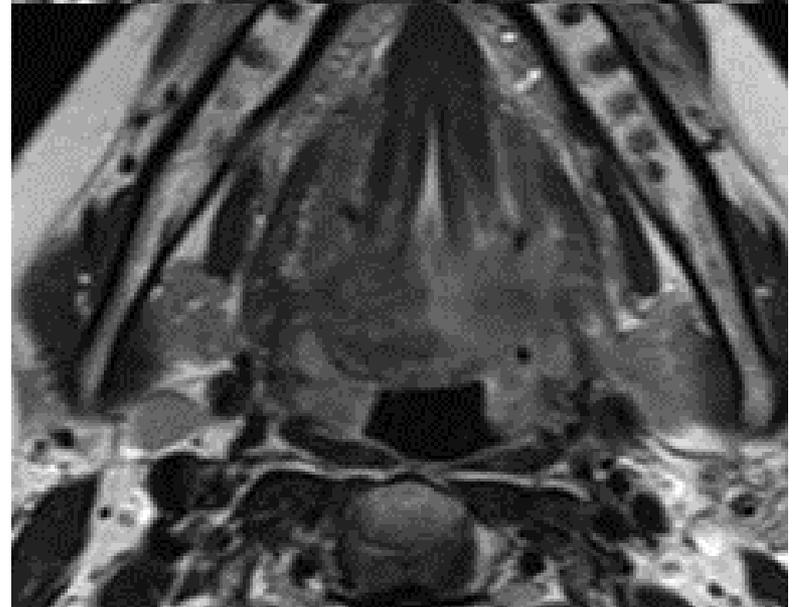

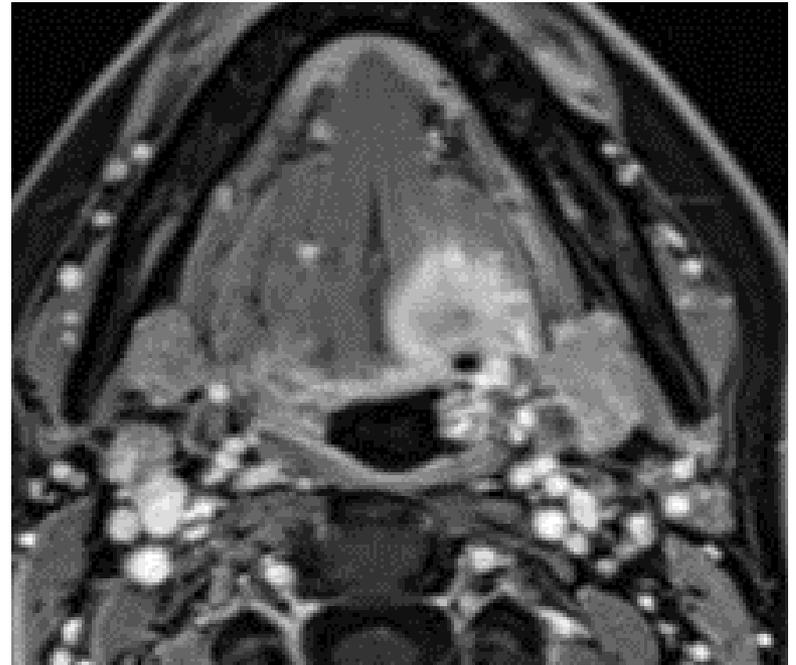

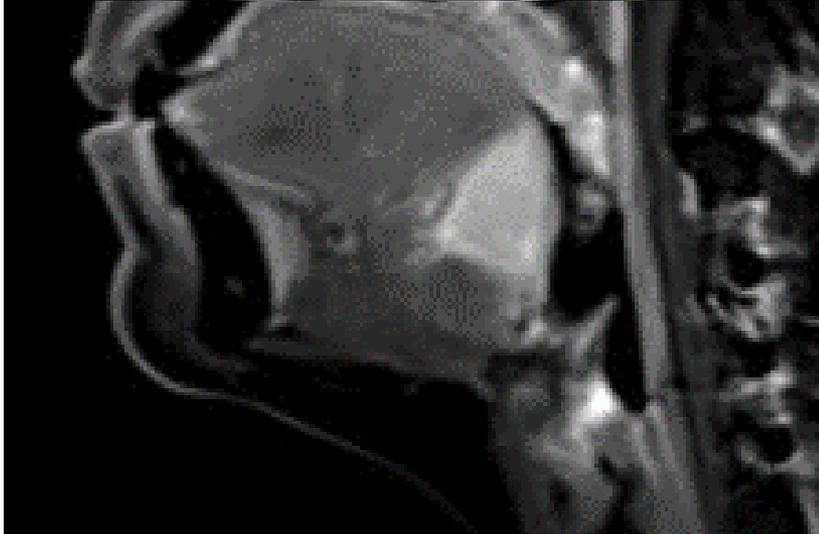

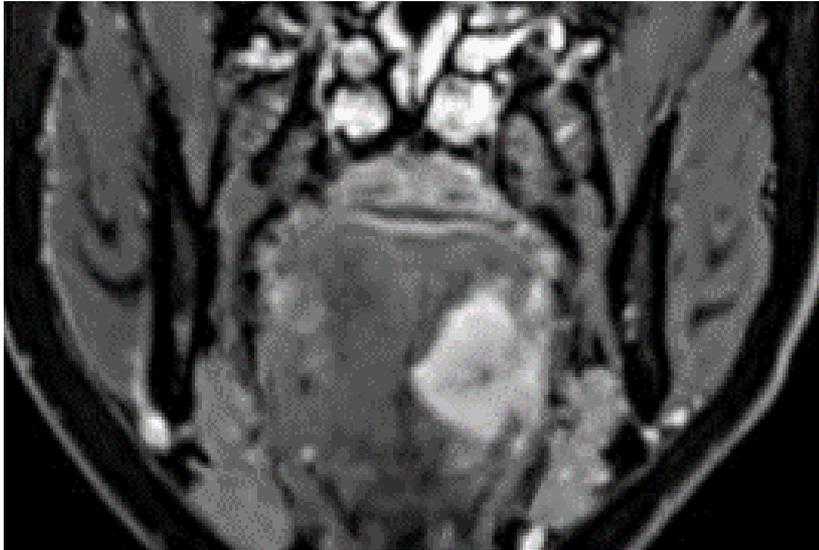

HPV+ : Tendenz zu \downarrow ADC in soliden Portionen

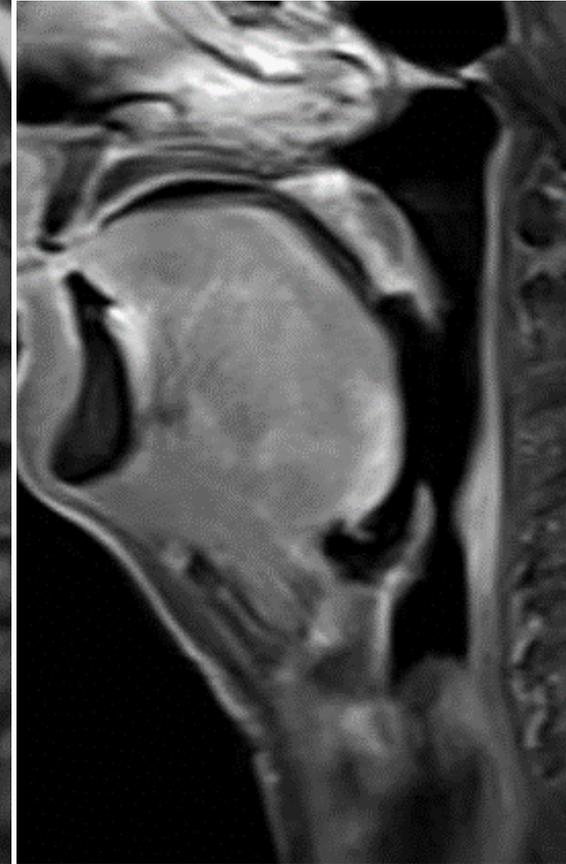

TORS of HPV+ tumour

50y f smoking & drinking
p16 neg

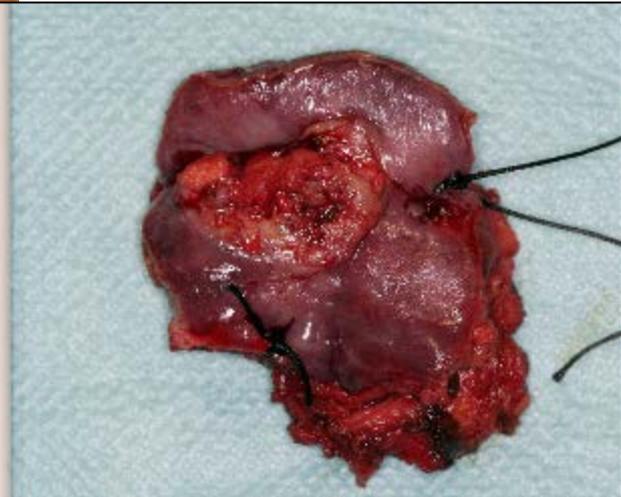

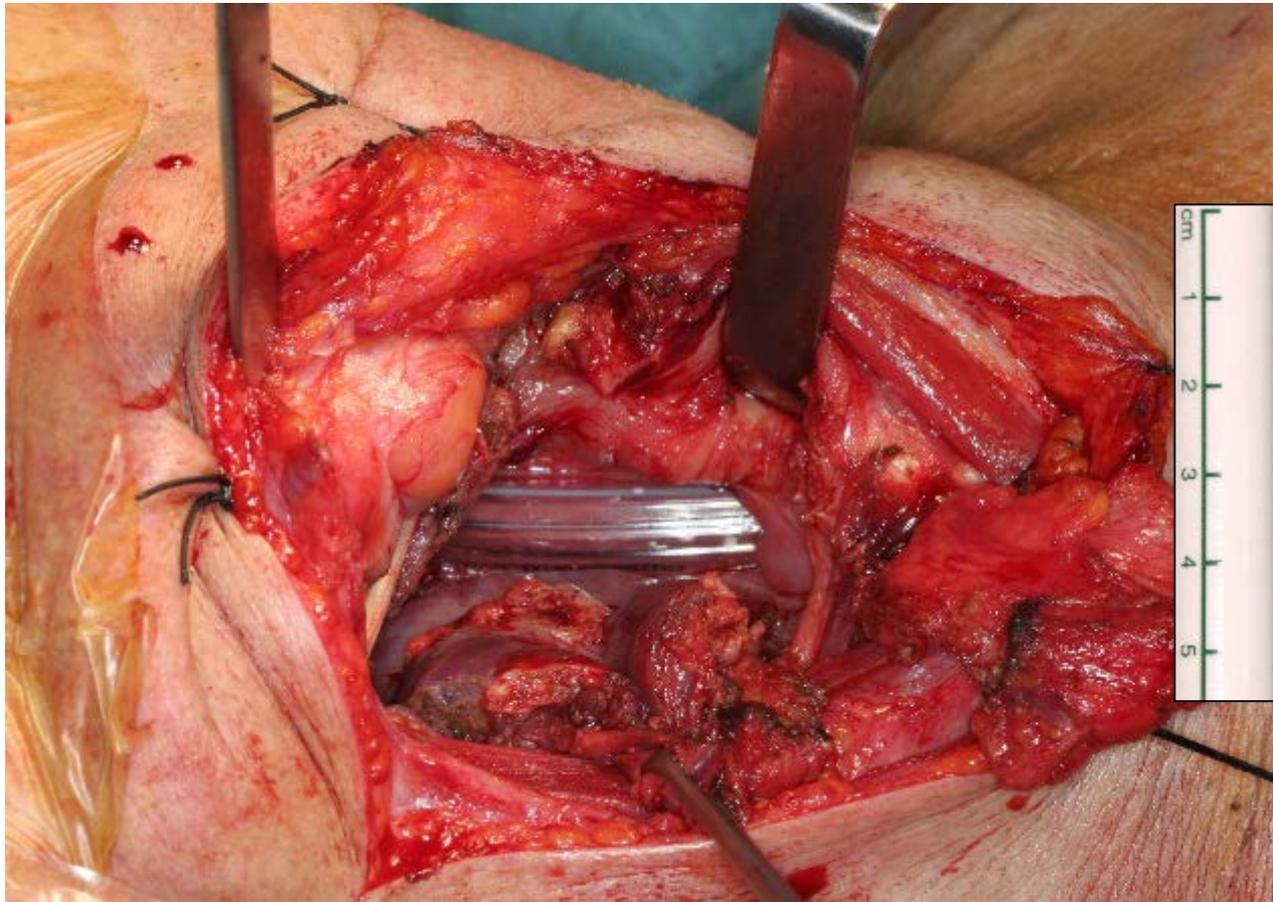

posterior pharyngeal wall

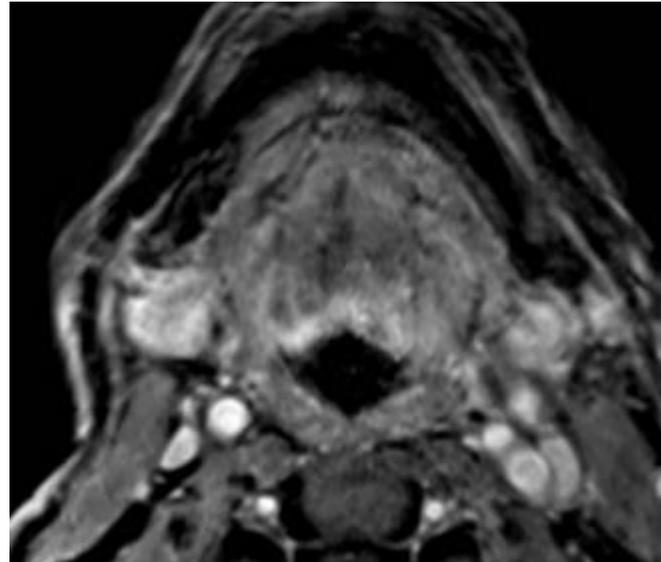

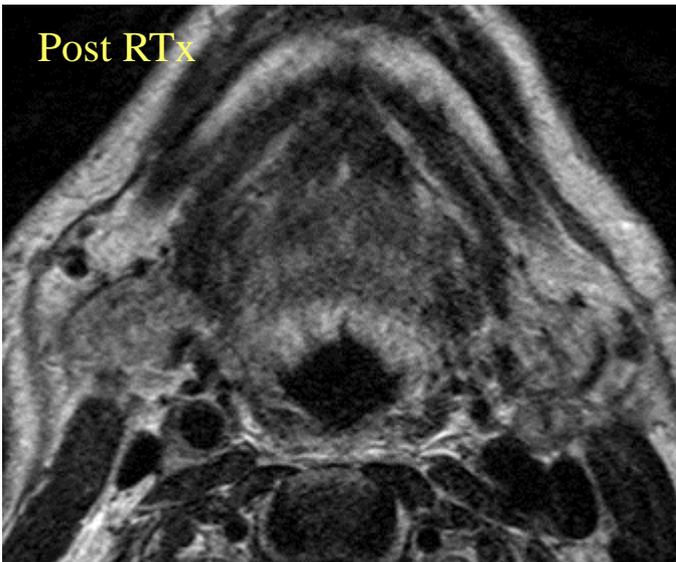

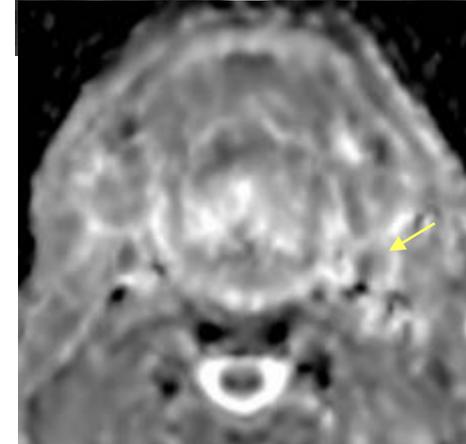

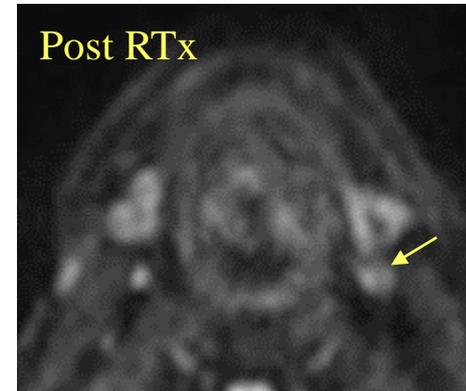

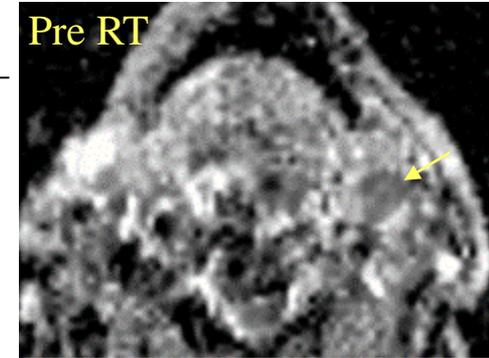

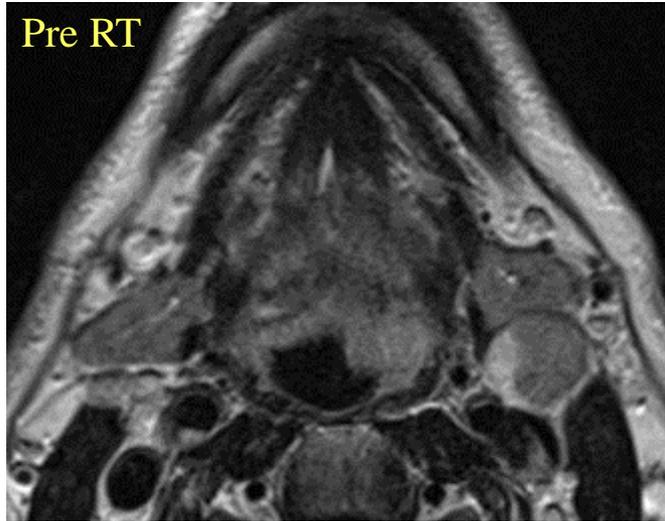

involvement of prevertebral fascia?

posterior pharyngeal wall

Primary – LN metastasis?

indication for salvage ND because of persisting nodal disease

nodal disease: MR + CT criteria

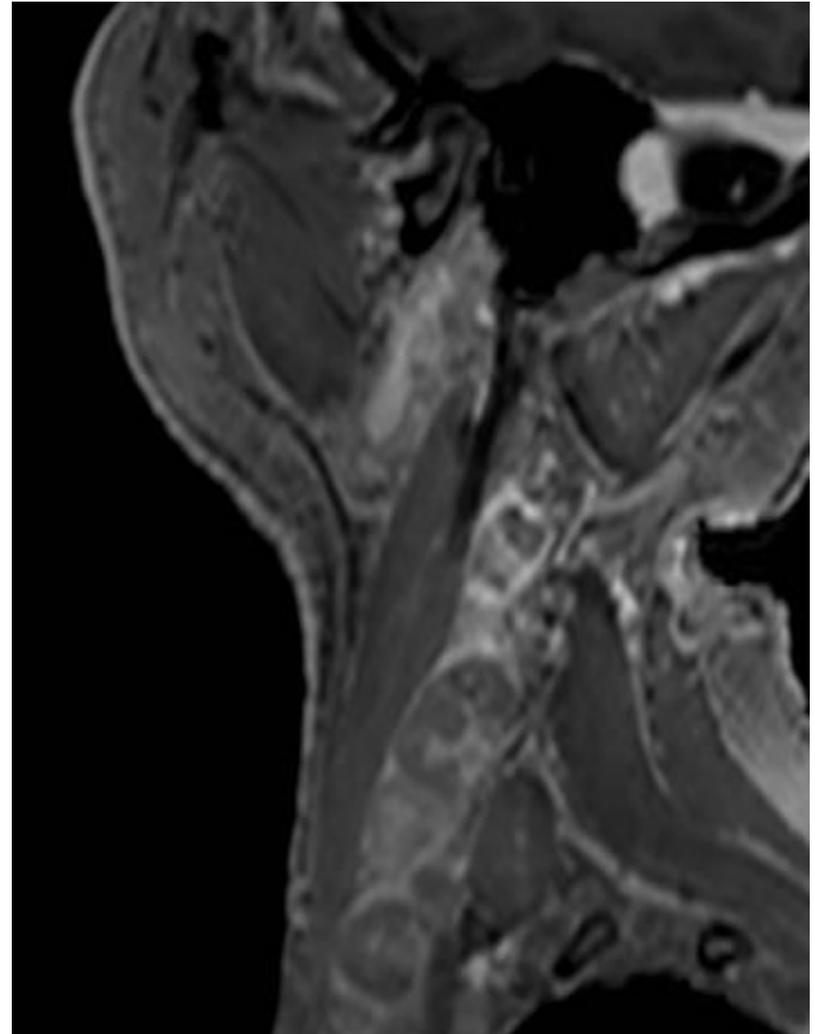

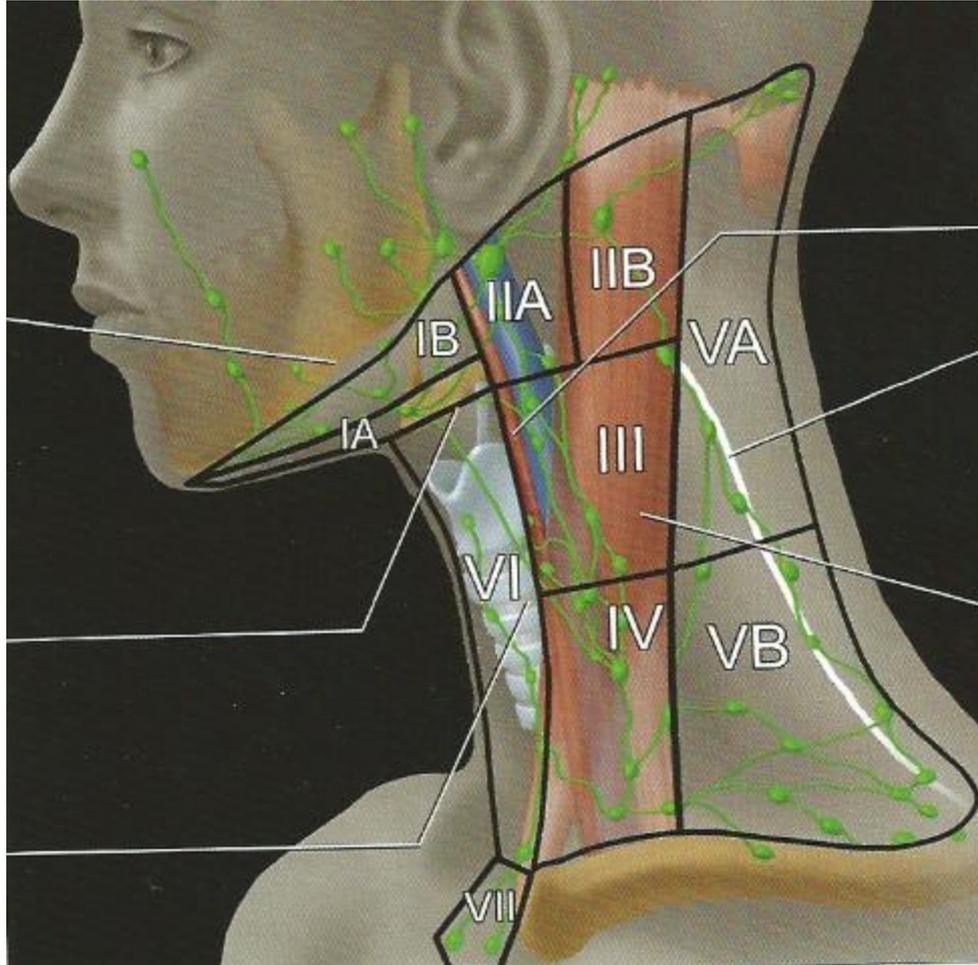

- > 10mm diameter of short axis
- > 8 mm transversal diameter of retropharyngeal nodes
- round shape (supporting criterion if size marginal)
- In of all sizes with central hypodensity, hypointensity
- Conglomerate of 3 or more marginally enlarged In
- diffuse delineation of surrounding tissue around enlarged In
- *„size is the least reliable among the criteria listed“*

Som PM. Detection of metastasis in cervical lymph nodes: CT and MR criteria and differential diagnosis. *AJR Am J Roentgenol* 1992; 58:961–969

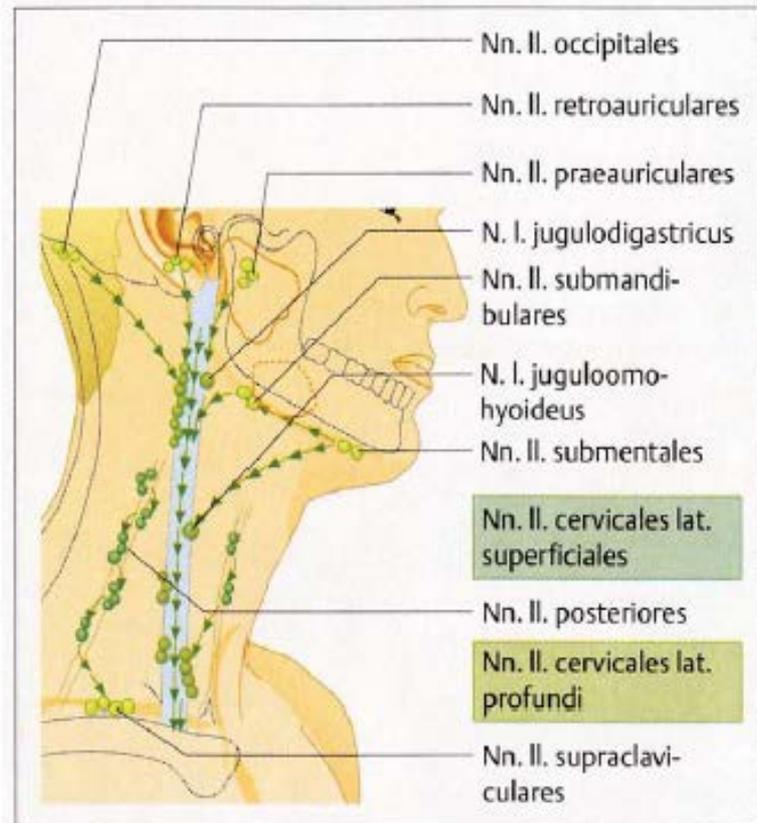

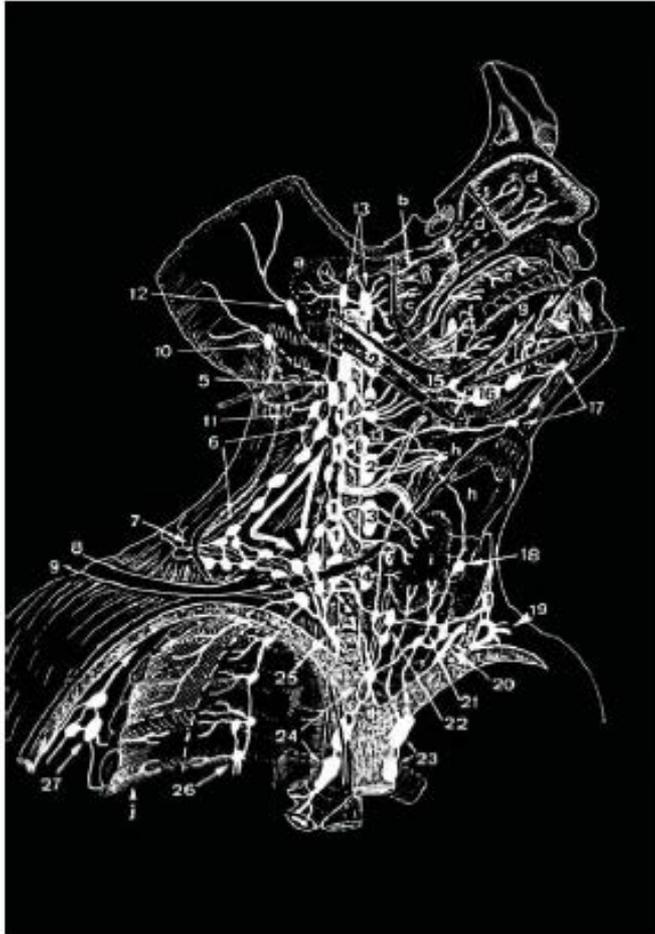

LN Staging

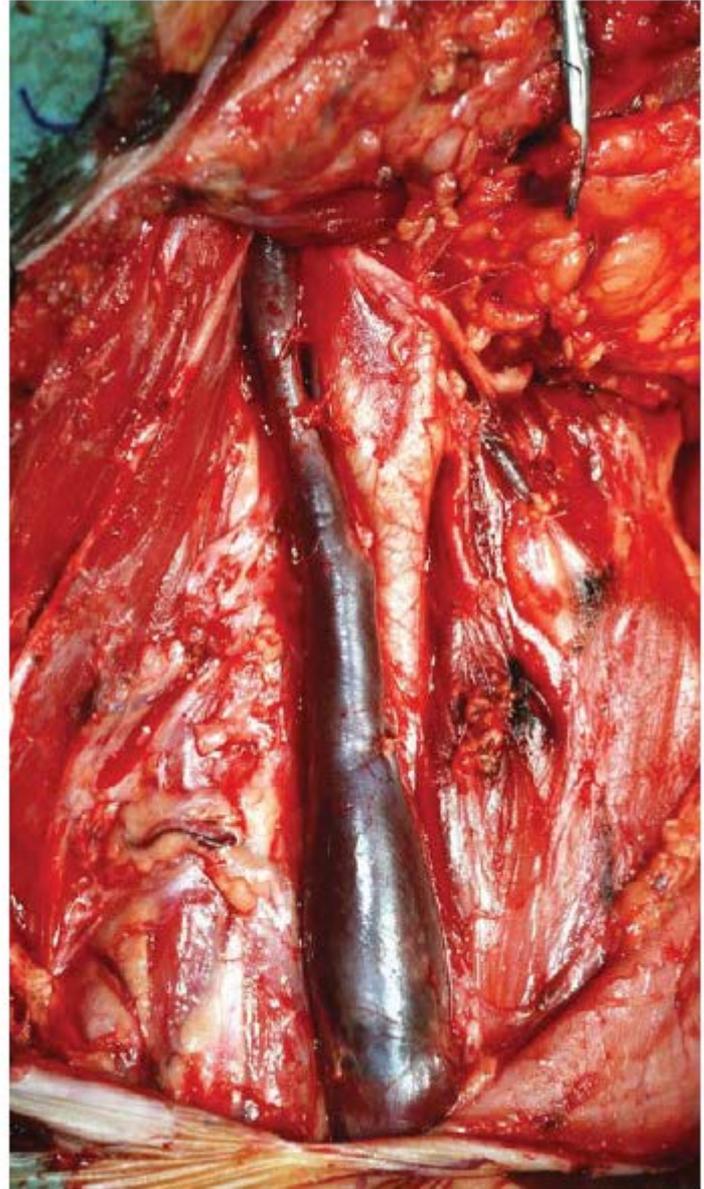

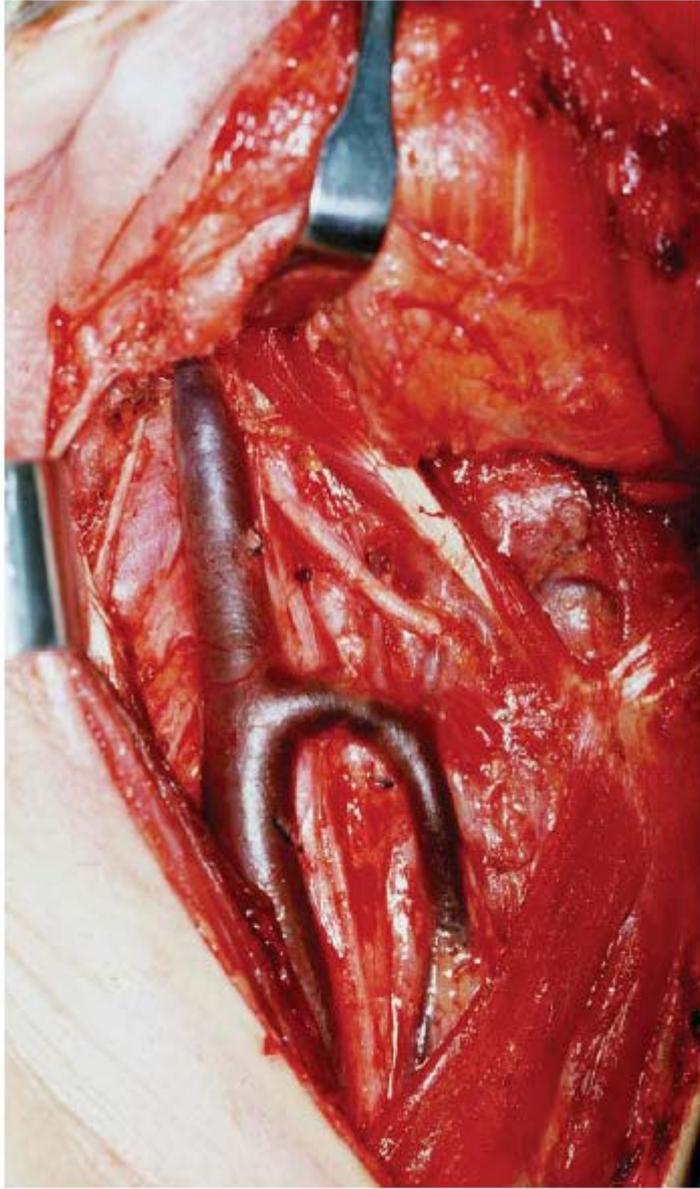

- **N0** no regional LN metastasis
- **N1** singular ipsilateral LN $\leq 3\text{cm}$
- **N2a** singular ipsilateral LN $> 3\text{cm} < 6\text{cm}$
- **N2b** multiple ipsilateral LN $< 6\text{cm}$
- **N2c** bilateral or kontralateral LN $< 6\text{cm}$
- **N3** LN Metastasis $> 6\text{cm}$

LN levels

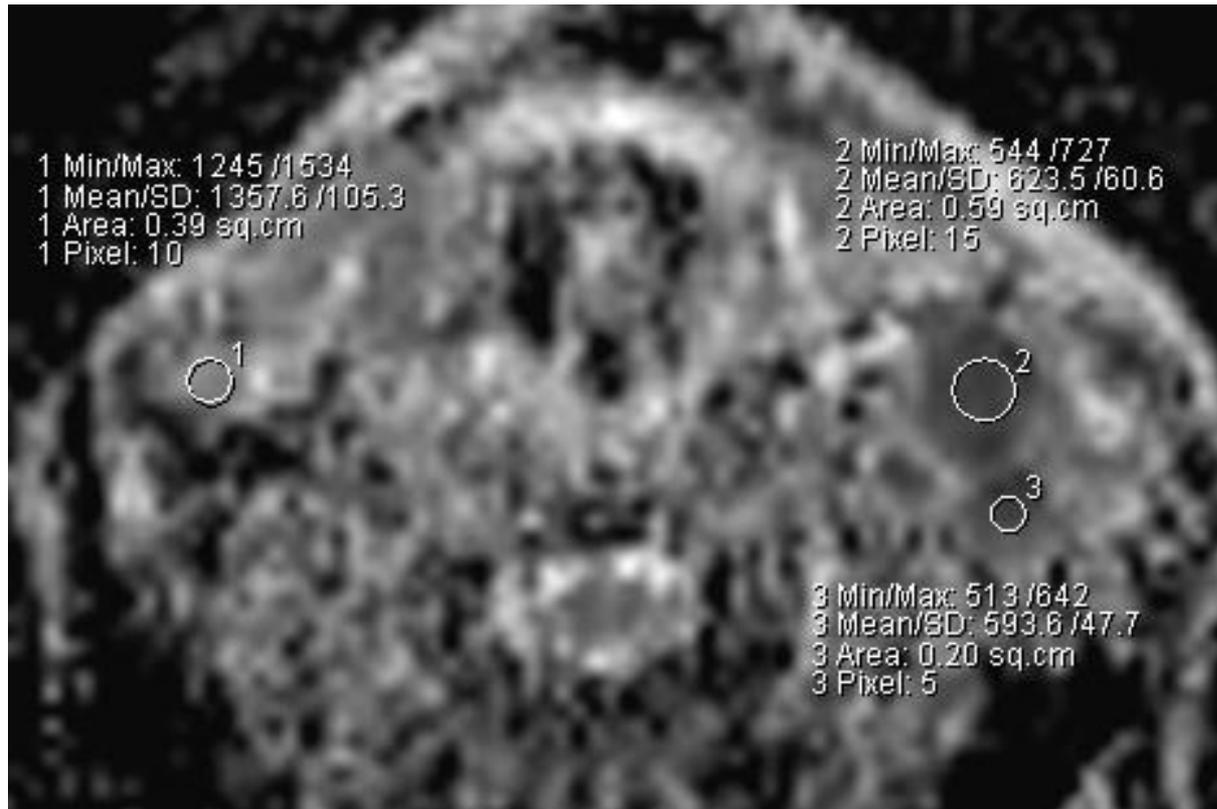

LK levels

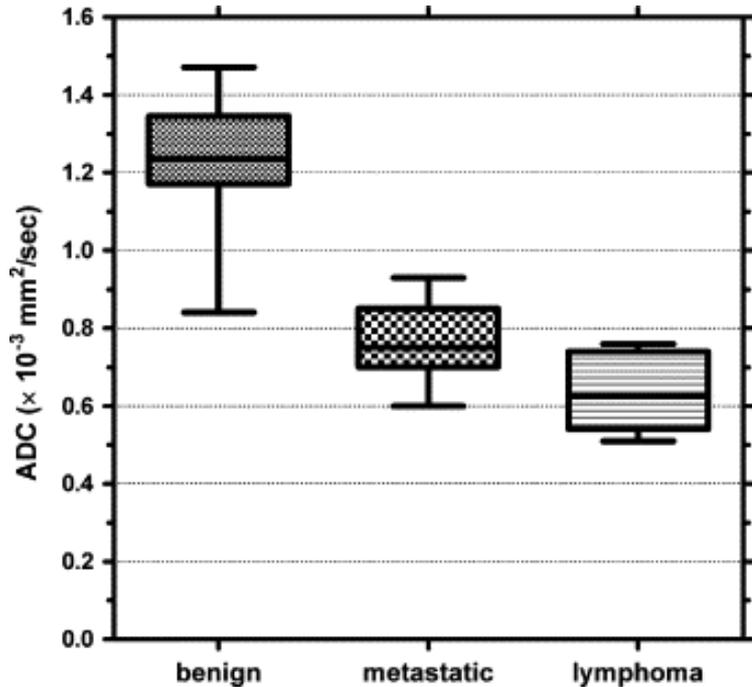

quantifying ADC values

the mean value of benign nodes $1.448 \times 10^{-3} \text{ mm}^2/\text{s}$;
the mean ADC value of malignant nodes $0.85 \times 10^{-3} \text{ mm}^2/\text{s}$,
best threshold value was $1.03 \times 10^{-3} \text{ mm}^2/\text{s}$, (sensitivity 100%, specificity of 92.9%).
Perrone A et al. European Journal of Radiology 2011; 77: 281-286

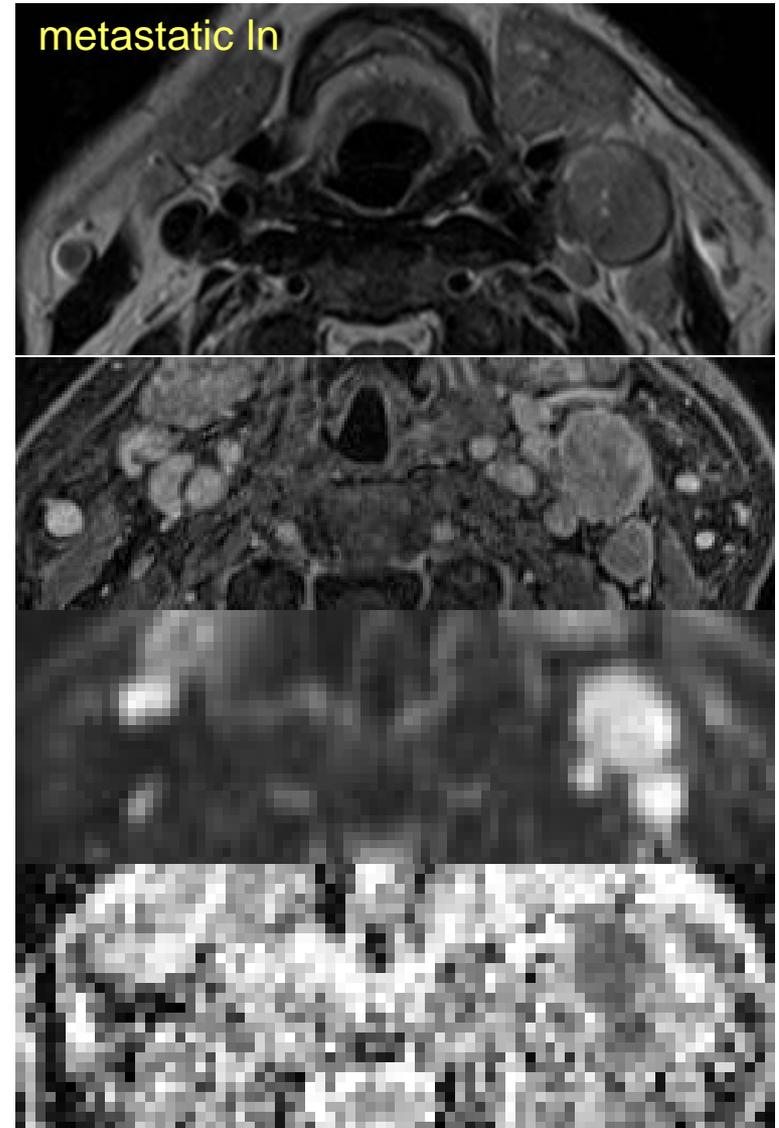

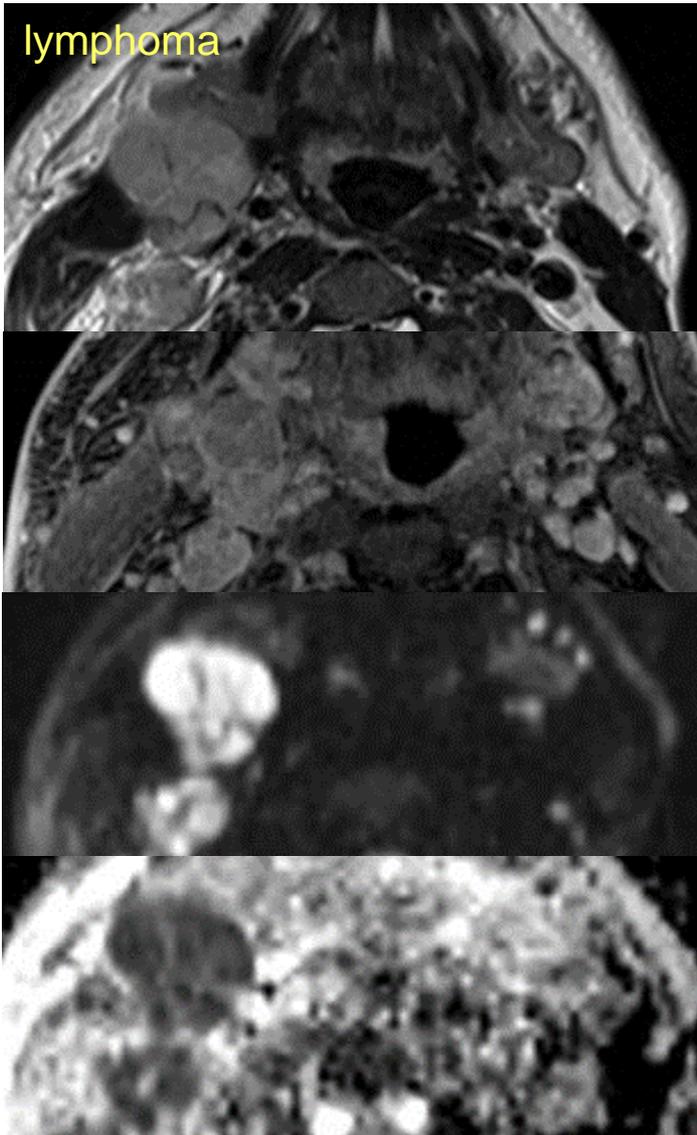

ADC threshold value for differentiating between benign and malignant cervical lymph nodes $1.02 \times 10^{-3} \text{ mm}^2/\text{s}$.

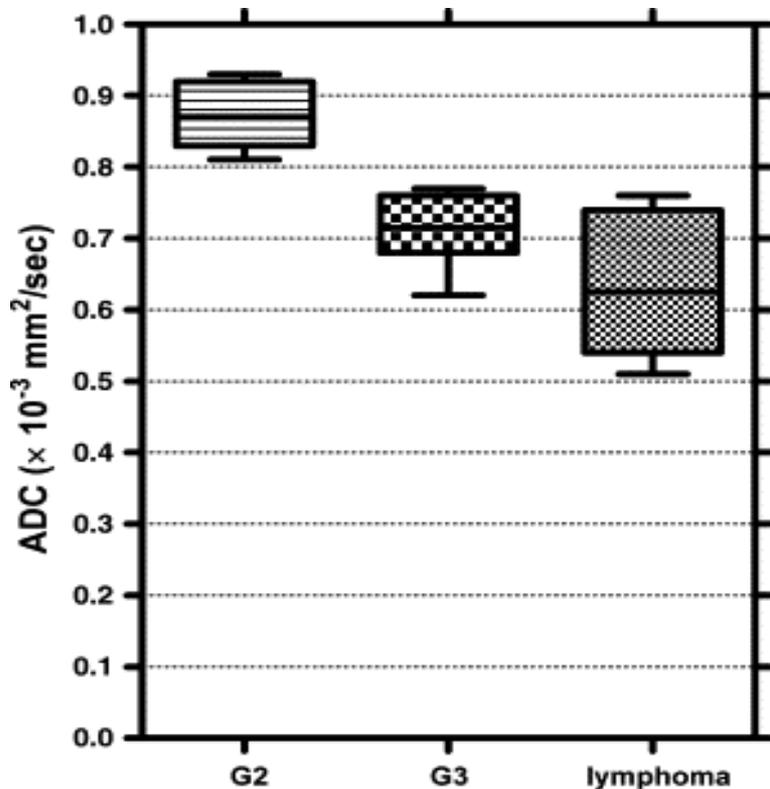

sensitivity	100%,
specificity	87.0%,
accuracy	94.3%,
PPV	90.9%
NPV	100%.

Holzapfel K et al. Value of diffusion-weighted MR imaging in the differentiation between benign and malignant cervical lymph nodes Eur J Radiol 2009; 72:381-387

ADC < lymphoma vs metastatic In

ADC ~ histologic grading of metastatic In

“ADC values of metastatic moderately (G2) & poorly (G3) differentiated carcinoma and lymphomatous nodes differences of ADC values between the three groups were statistically significant ($P < 0.05$) and ($P < 0.05$)”.

ADC values under treatment

tumour

responders → ADC (<0.79) vs non-responders > 0.79) pre Tx

¹Δ ADC > 14% SE 88%, SP 91% 2w Ch-RT

¹Δ ADC > 25% SE 100%, SP 91% 4w Ch-RT

²Δ ADC > 35% SE 45%, SP 100% 6 w post Tx

³ADC > 1.3×10^{-3} mm²/s SE 94%, SP95% end CH-RT

lymph nodes

¹Δ ADC > 14% SE 80%, SP 89% 2w Ch-RT

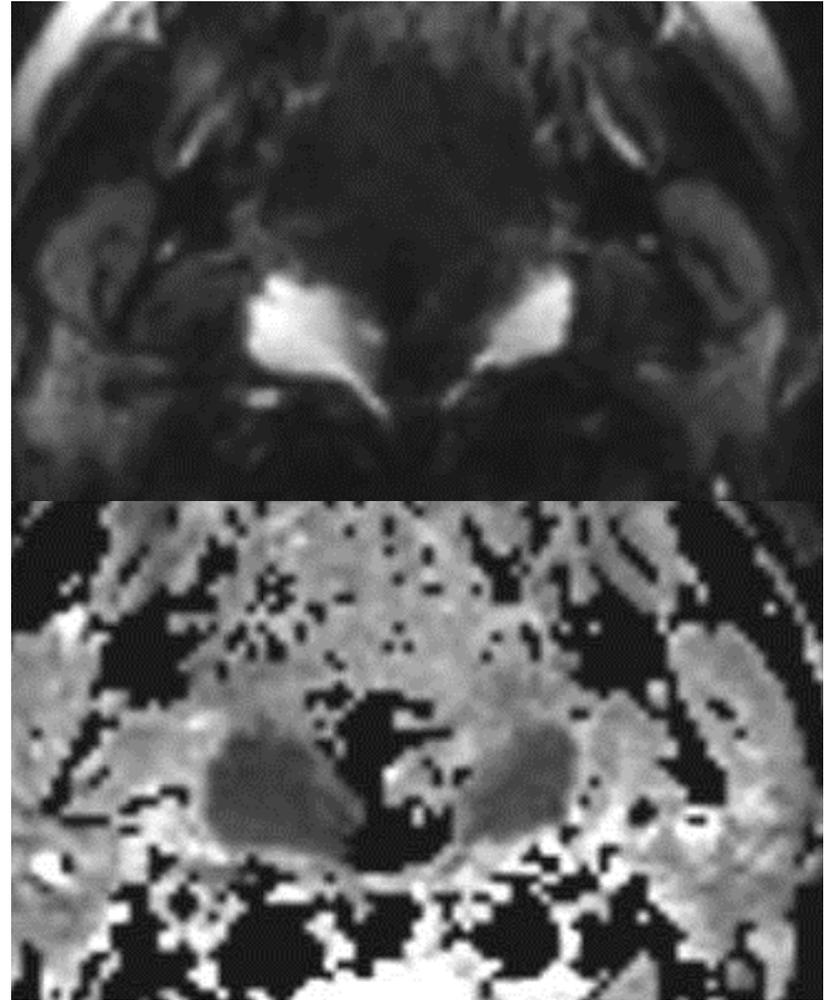

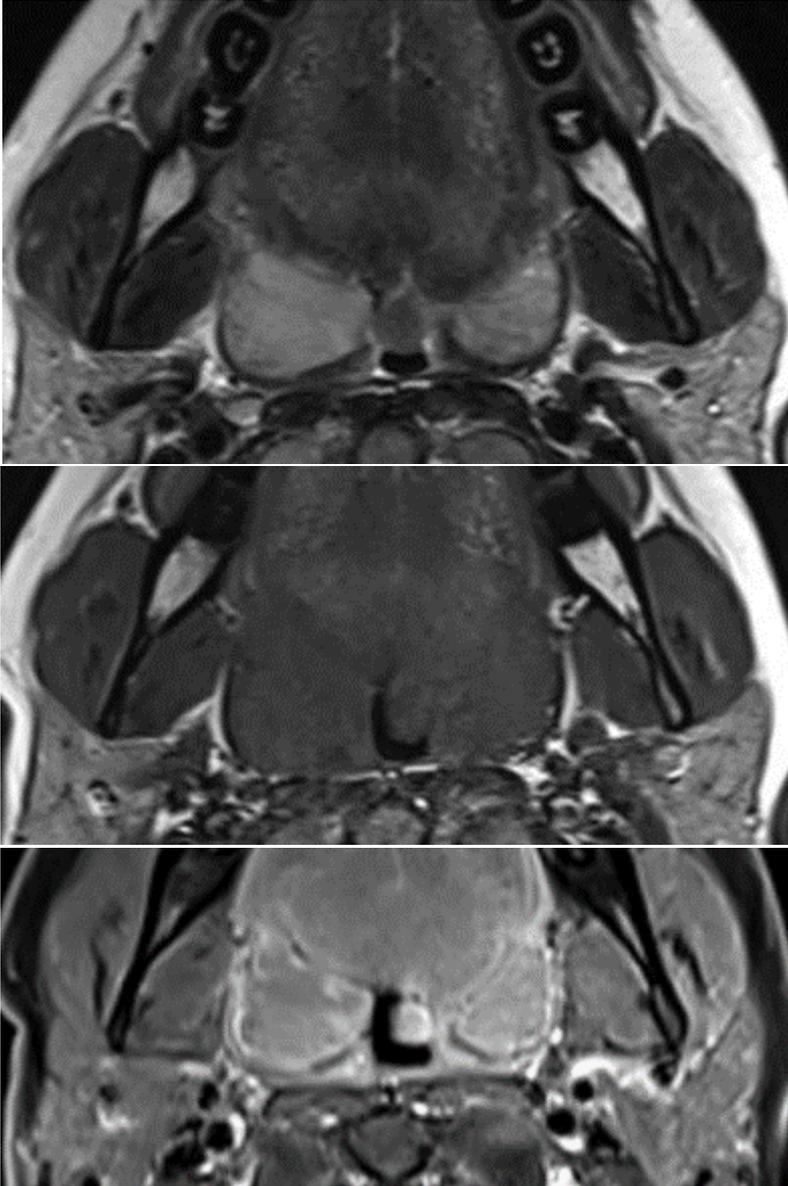

¹Δ ADC > 19% SE 80%, SP 96% 4 w Ch-RT

DCE Perfusion

information regarding micro-vascular structure of neoplasia analyzing kinetics of iv contrast dye bolus

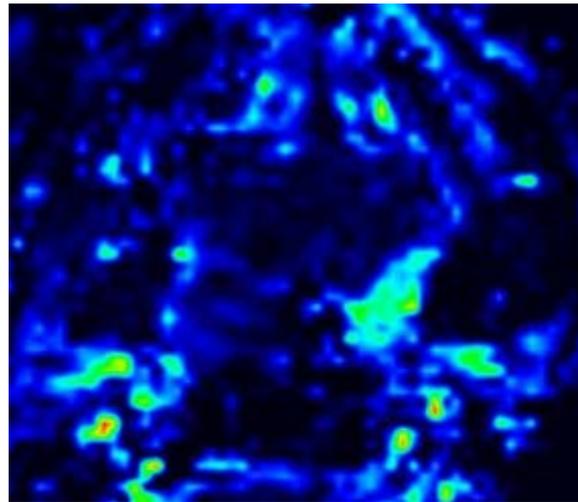

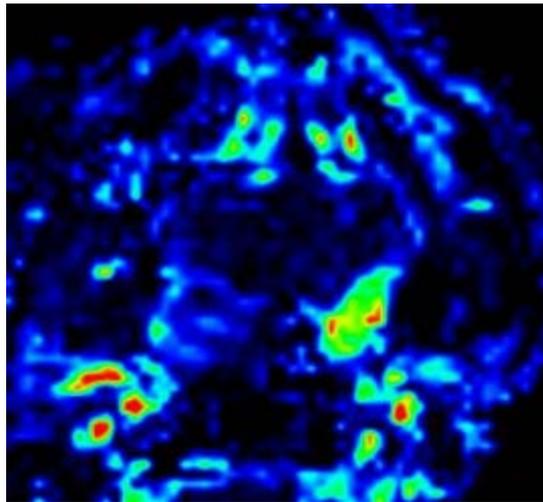

Table 3.

Mean and standard deviation of the DCE parameters for UD, SCC and Lymphoma

	UD	SCC	Lymphoma
Tofts	28	28	8
k_{trans} (1/min)	1.26 ± 0.61	0.78 ± 0.47	0.59 ± 0.18
v_e	0.65 ± 0.16	0.64 ± 0.13	0.54 ± 0.17
v_p	0.11 ± 0.12	0.08 ± 0.06	0.07 ± 0.03
Semi-quantitative			
AUC60 (norm. unit)	0.31 ± 0.11	0.23 ± 0.10	0.21 ± 0.05
AUC90 (norm. unit)	0.74 ± 0.28	0.54 ± 0.21	0.50 ± 0.09

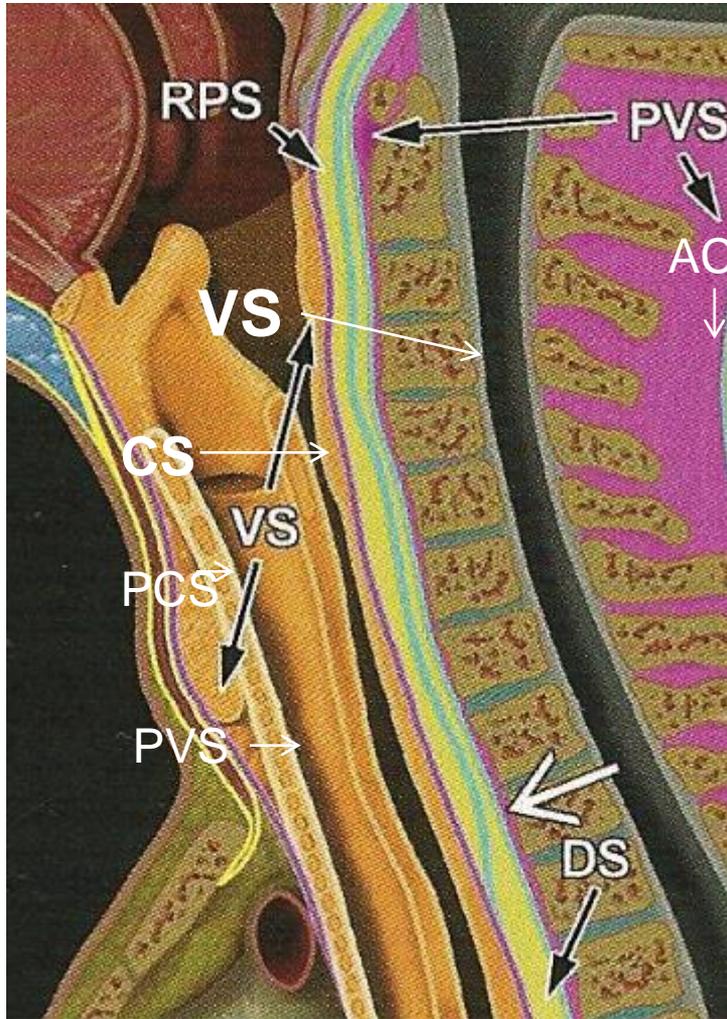

Lee FK-H et al. Dynamic contrast enhancement magnetic resonance imaging (DCE-MRI) for differential diagnosis in head and neck cancers. Eur J radiology 2012; 81:784–788

visceral space

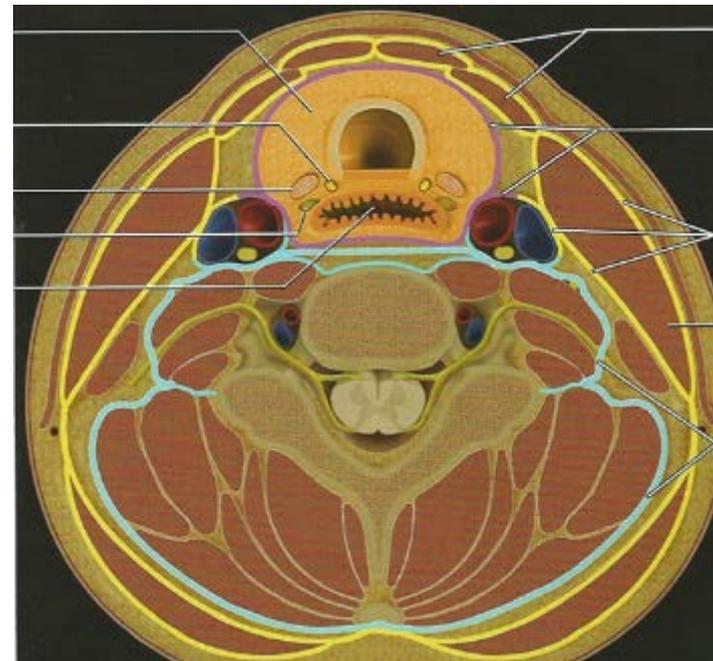

hyoid → mediastinum

content:

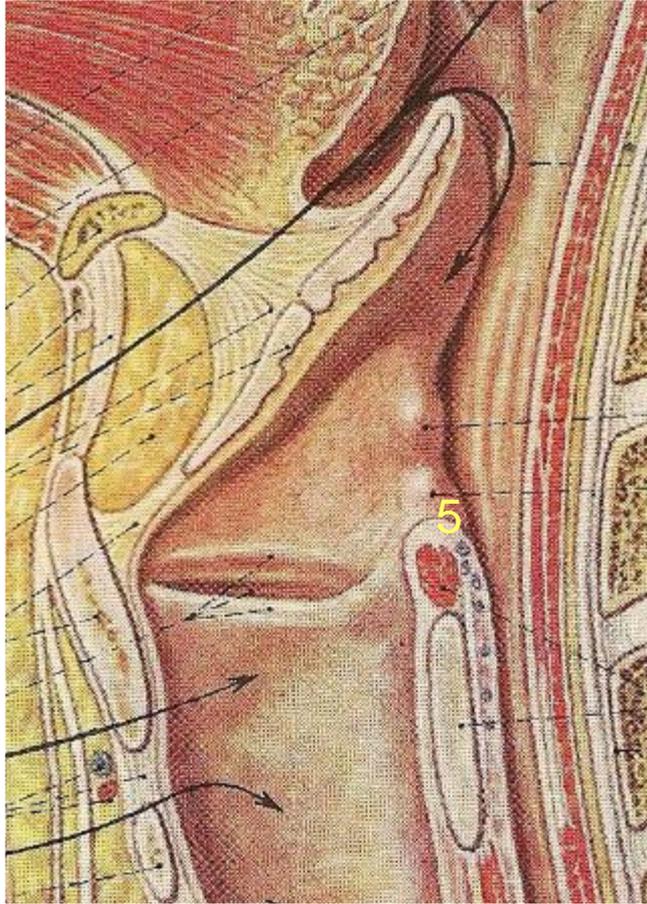

larynx
trachea
hypopharynx
cervical esophagus
(para-)thyroid(s)
recurrent laryngeal n.
Ln (pre- & paratracheal)

visceral space – middle sheet
anterior cervical space
carotid space
retropharyngeal space
«danger space»

subdivision of the larynx

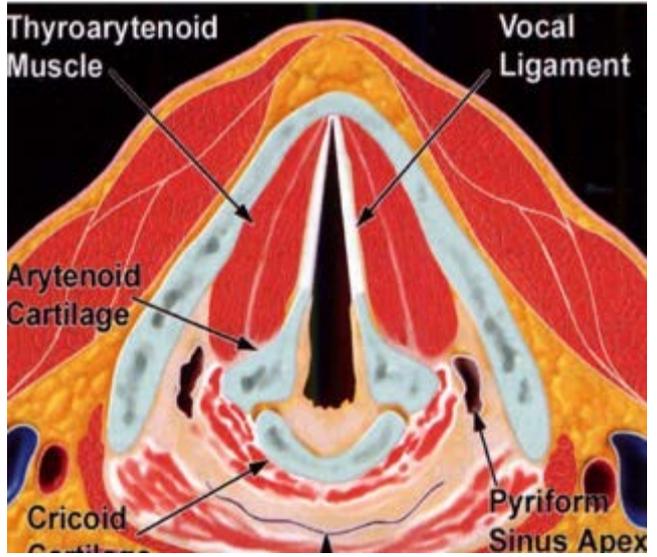

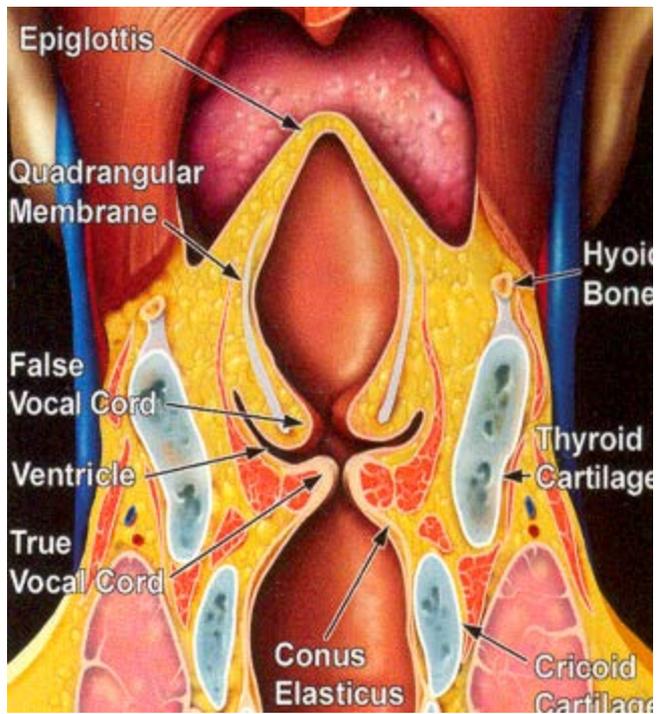

supraglottic

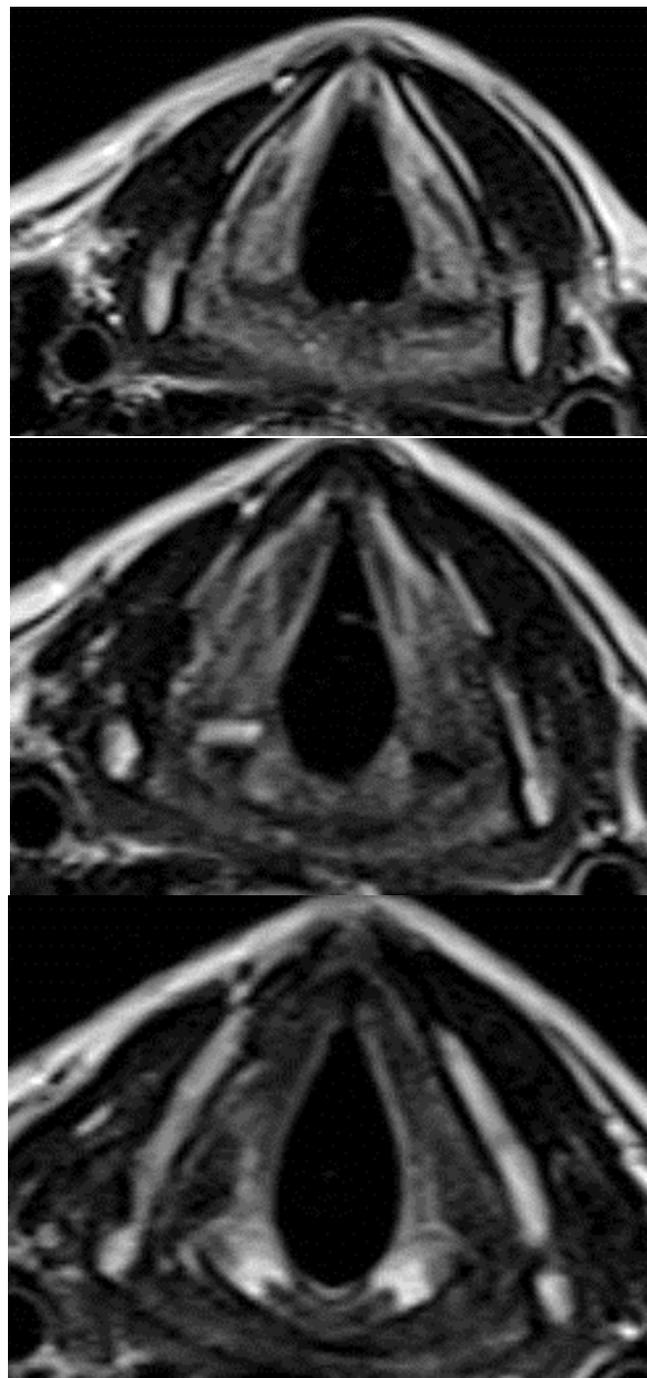

glottic

subglottic

transverse + oblique arytenoid mm.

m. vocalis = medial fibers of thyroarytenoid m.

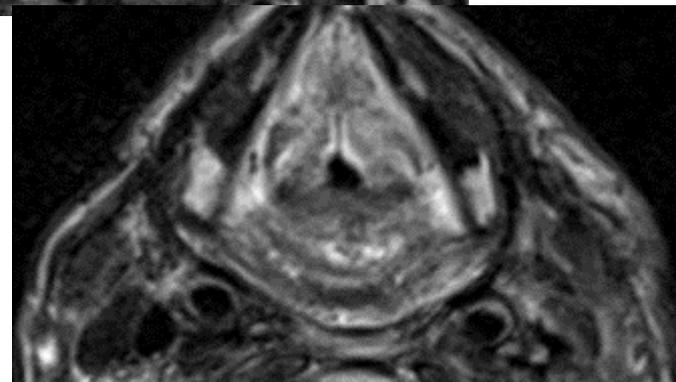

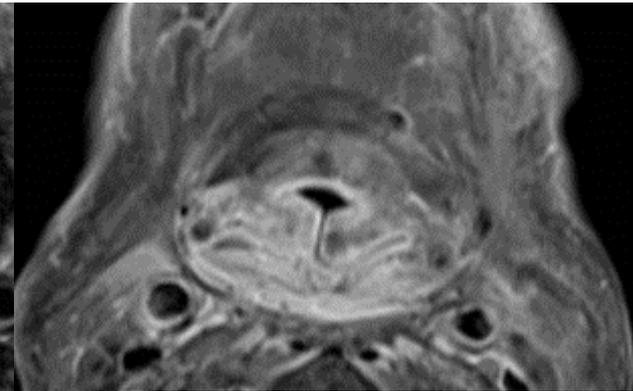

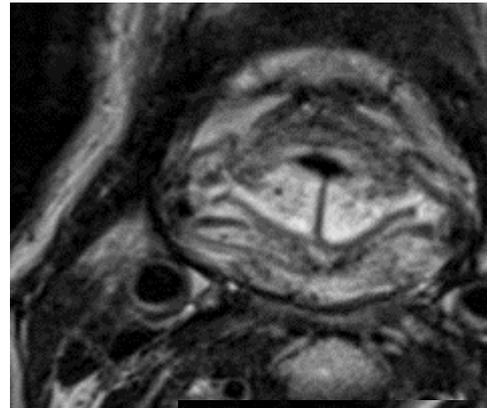

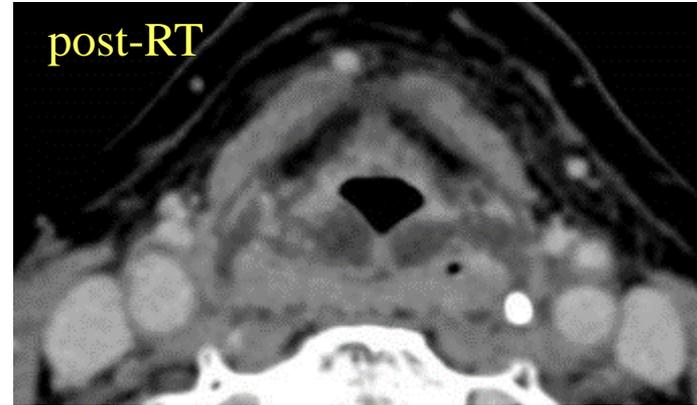

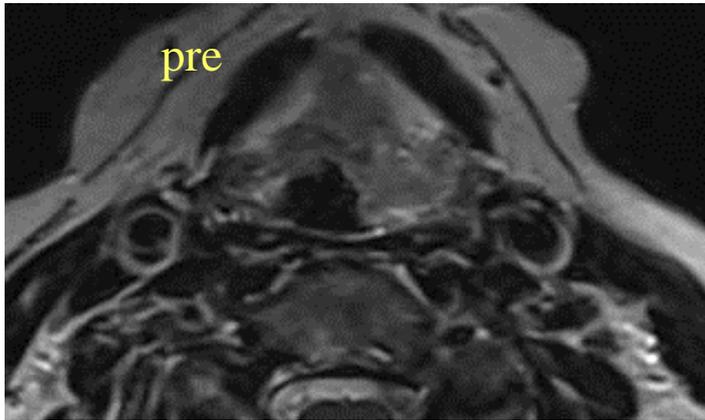

T2 space
 1.2mm

laryngeal cancer

90% SCC

- supraglottic 30% → pre-, paraglottic ?
In 38-50% (20-25% bilat)
- glottic 65% → ant. commissure, contralateral vocal cord
para-/subglottic extension, laryngeal skeleton & involvement of extralaryngeal space ?
In 10-25% over all / T2 5%, T3 18%, T4 32%
- subglottic 2- 5%
→ trachea (thyroid, esophagus) ?

supraglottic laryngeal-cancer post-RT edema

T classification glottic cancer

- T1: tumour confined to vocal cord(s) (\pm ant. or post. commissure)
mobility not impaired
 - T1a: tumour confined to one vocal cord
 - T1b: tumor affects both vocal cords

- T2: extention to supraglottic &/or subglottic space, &/or impaired vocal cord mobility

- T3: tumour confined to the larynx, paraglottic &/or infiltration of the inner layer of thyroid cartilage, fixed vocal cord

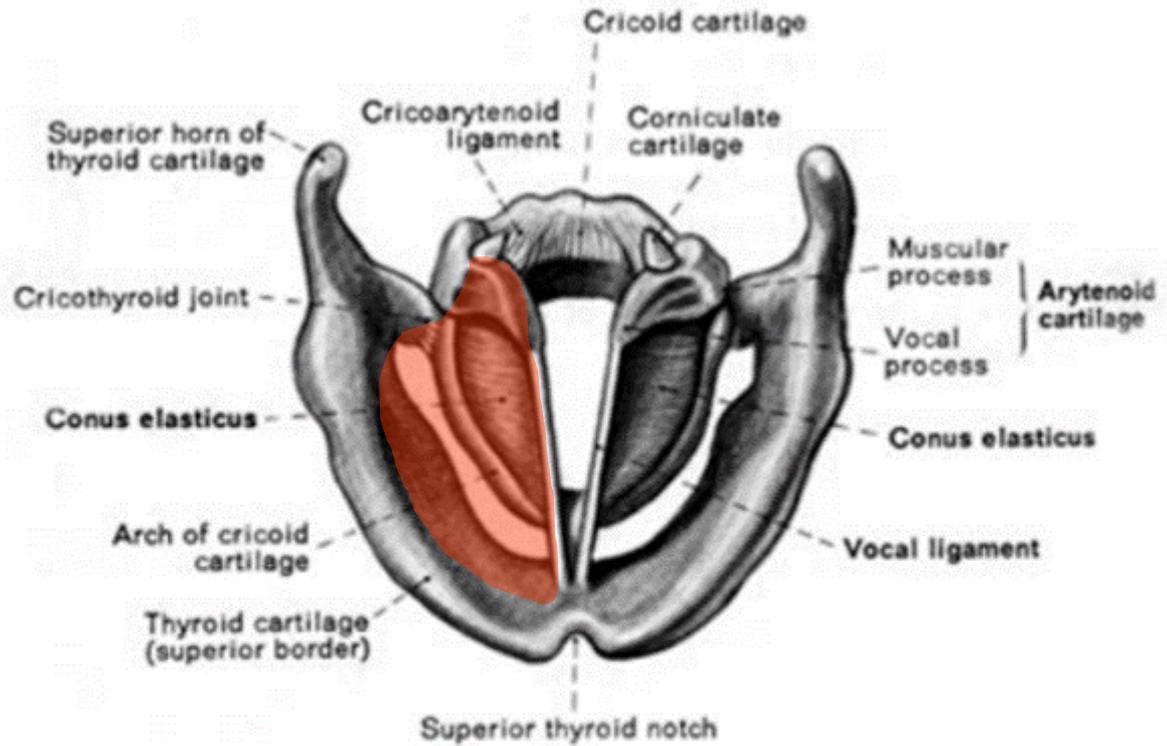

- T4: tumour breaches thyroid cartilage, &/or extralaryngeal extention (e.g. trachea, thyroid, pharynx)

quadrangular membrane
«towel of connective tissue»
epiglottis to arytaenoid
cartilages

Conus elasticus

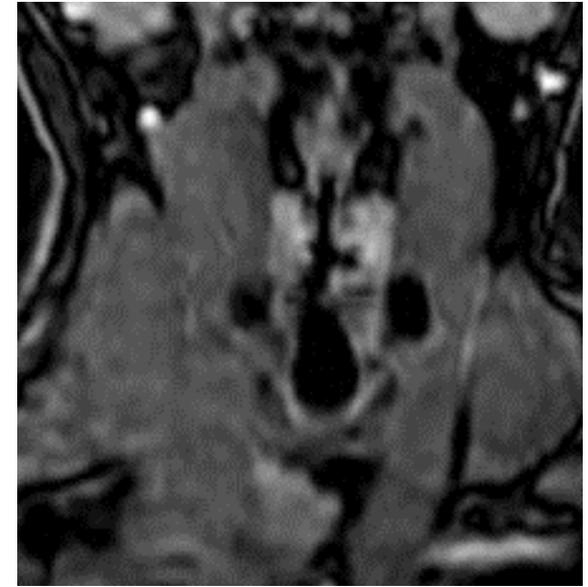

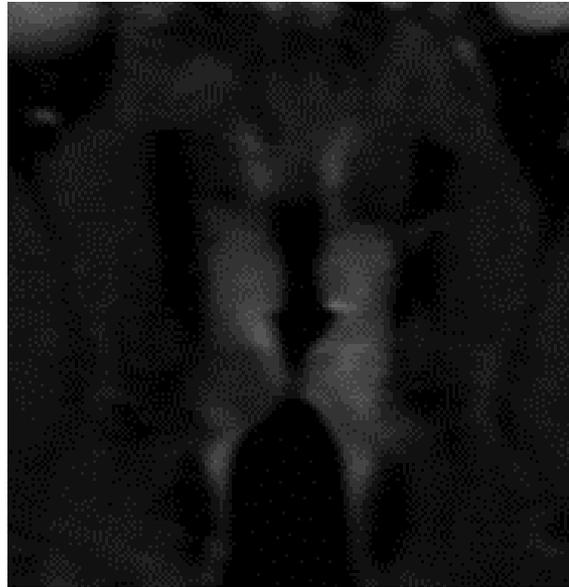

Broyle's Ligament: no peri-
chondrium

Hyoepiglottic ligament: «roof»
Of the para- & preepiglottic
space

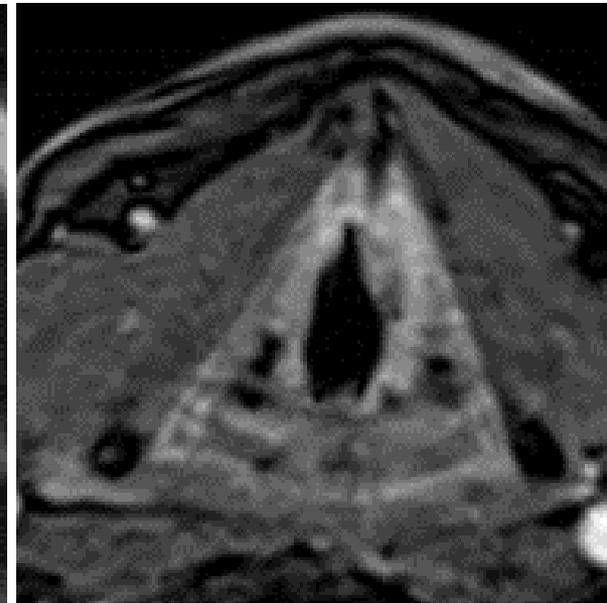

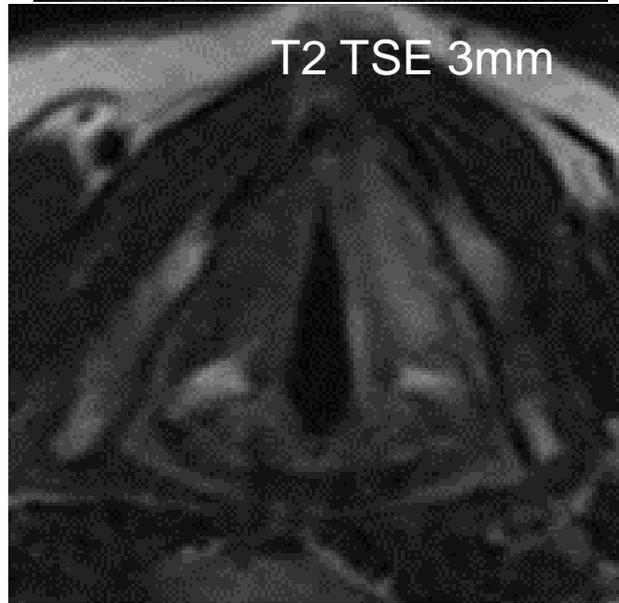

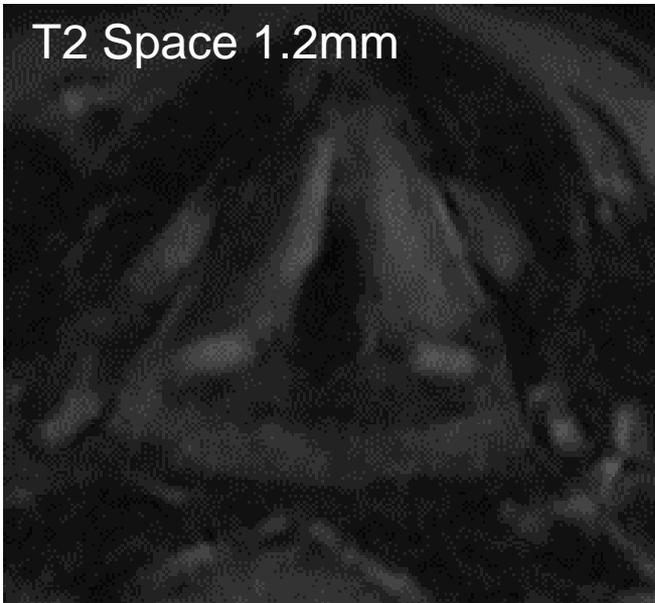

glottic Ca with paraglottic extension (T3)

supra-subglottic ?
paraglottic ± cartilage ?

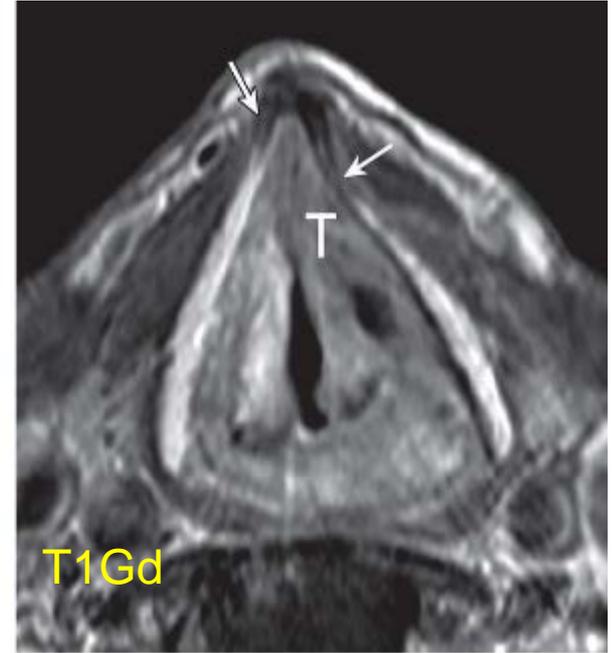

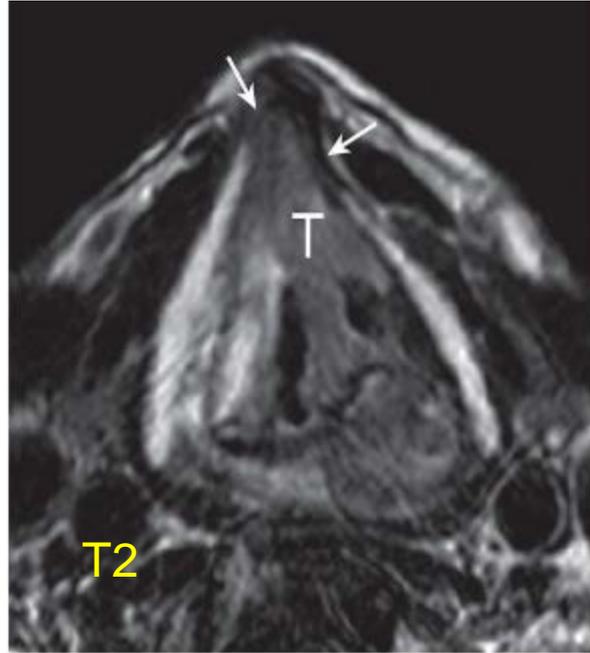

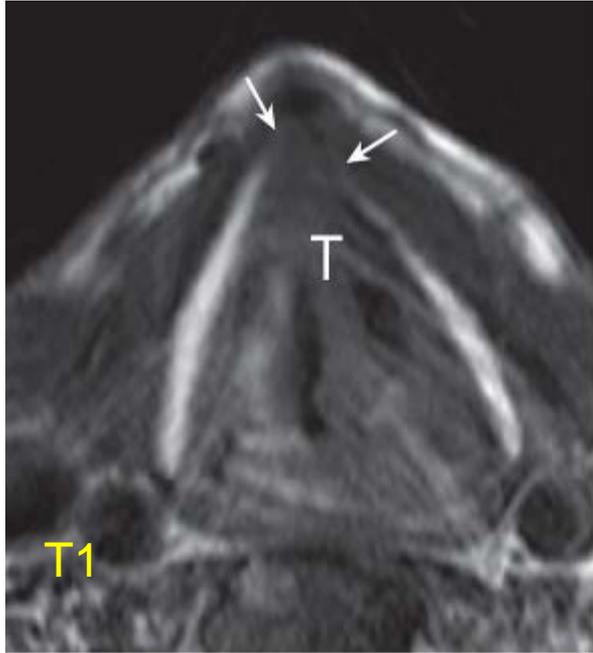

T2 Space 1.2mm

T2 TSE 3mm

MP 1946 increasing hoarseness, fixed vocal cord

infiltration of thyroid cartilage

Resonance thyroid cart. when involved with tu

T 1	low
T2	~ tumour
T1 + Gd	~ tumour

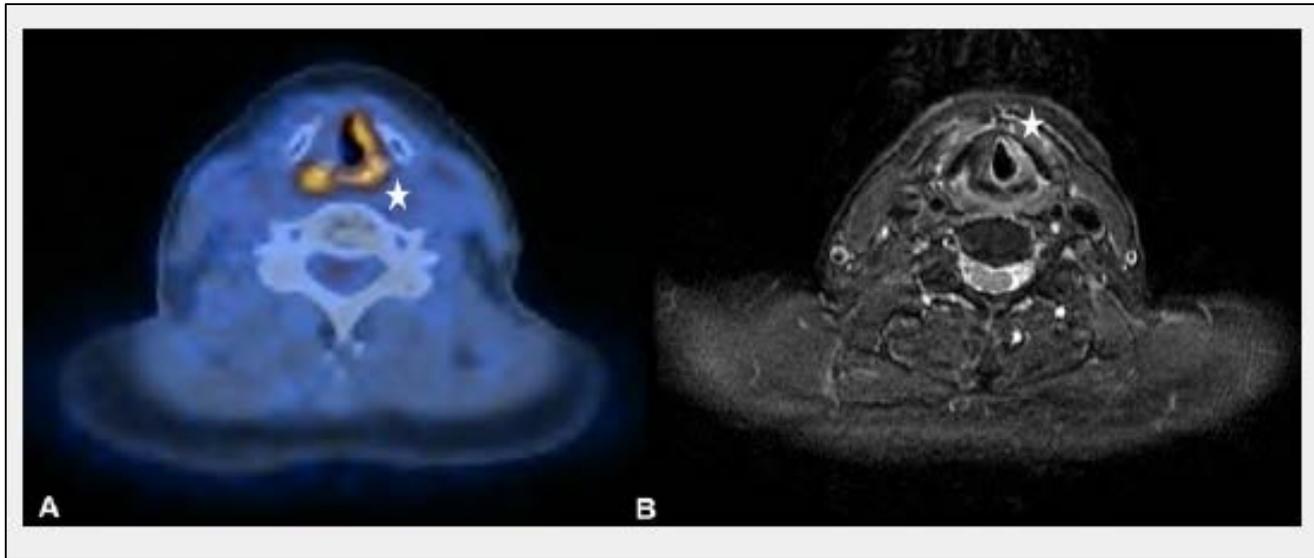

Resonance thyroid cart. + inflammation

T 1	low
T2	> tumour
T1 + Gd	> tumour

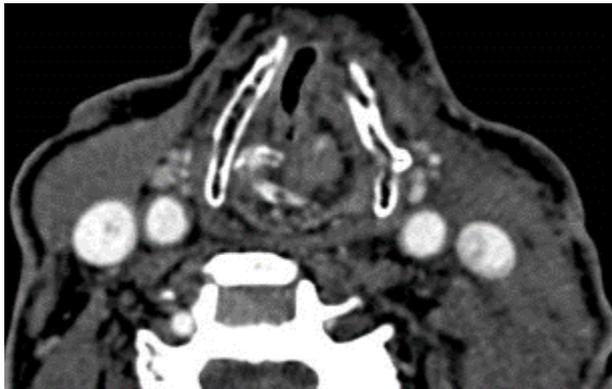

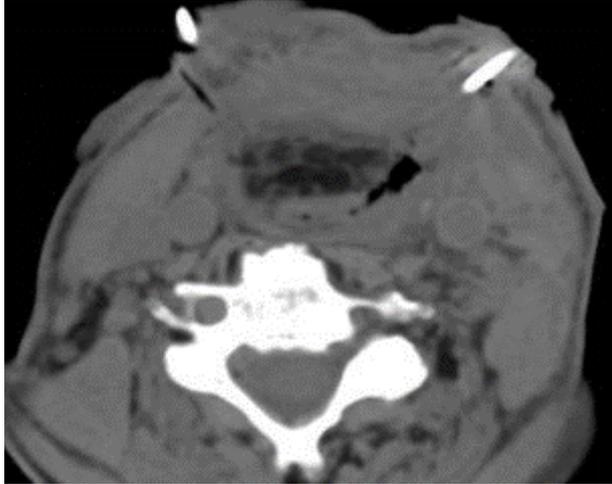

Identification of a morphologic correlate in PET-positive findings

How aggressively shall we take biopsies?

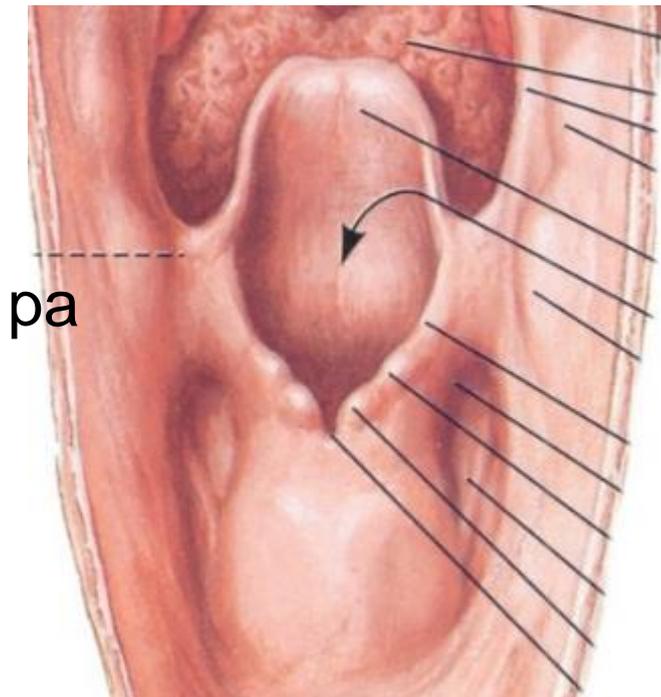

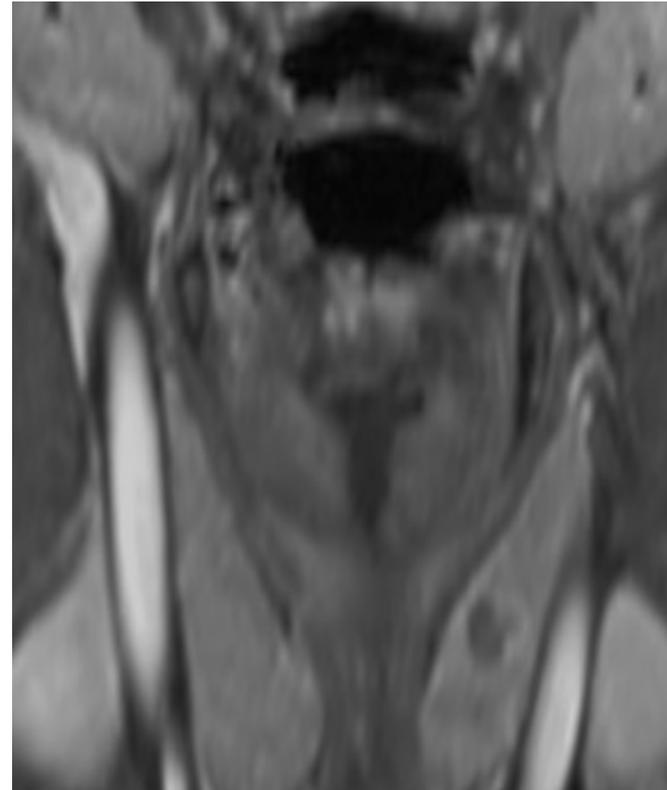

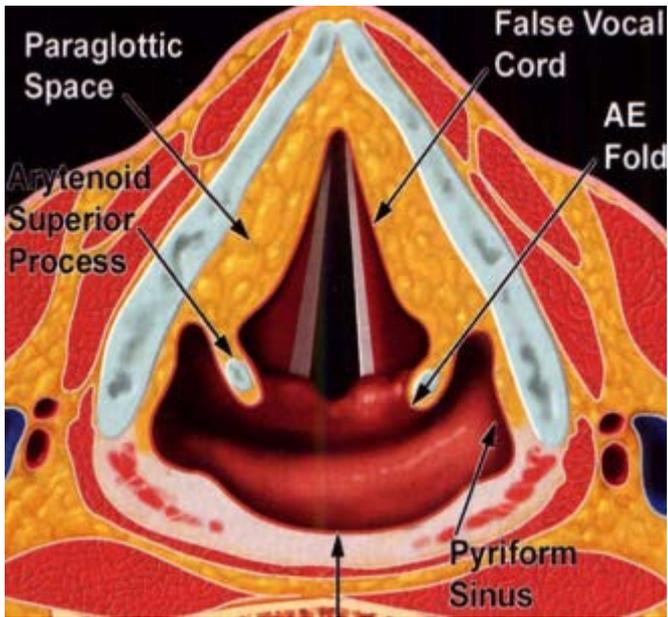

- Meerwein C et al. Post-treatment surveillance of head and neck cancer: pitfalls in the interpretation of FDG PET-CT/MRI. Swiss Med Wkly. 2015 Feb 21

post laryngeal cancer

hypopharynx:

piriform sinus; postcricoid region, posterior wall of pharyngeal wall

hypopharyngeal cancer

- piriform sinus 60%
- postcricoid region 25%
- posterior wall 15%

- 10% synchronous/ 25% metachronous primaries
- 50-75% metastatic lymph nodes
- prognosis: piriform sinus > posterior wall > postcricoid

staging

hypopharyngeal- cancer:

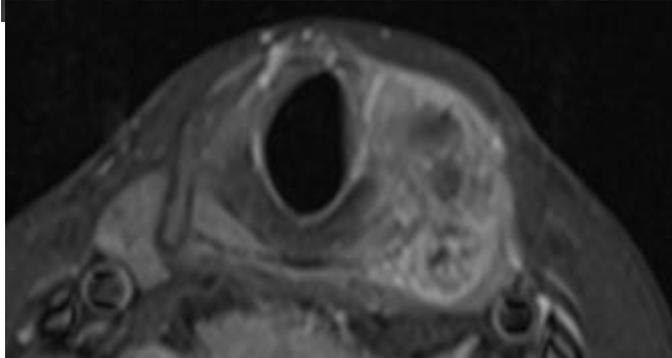

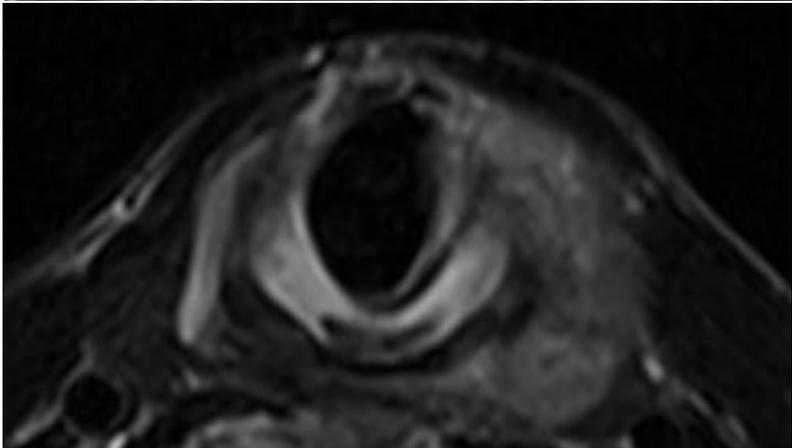

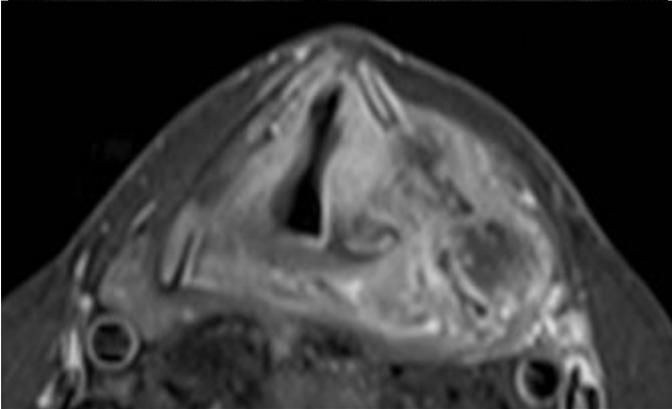

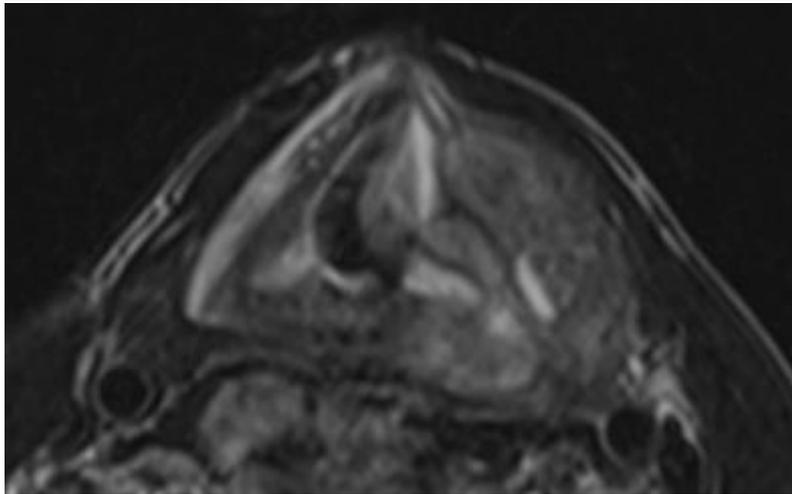

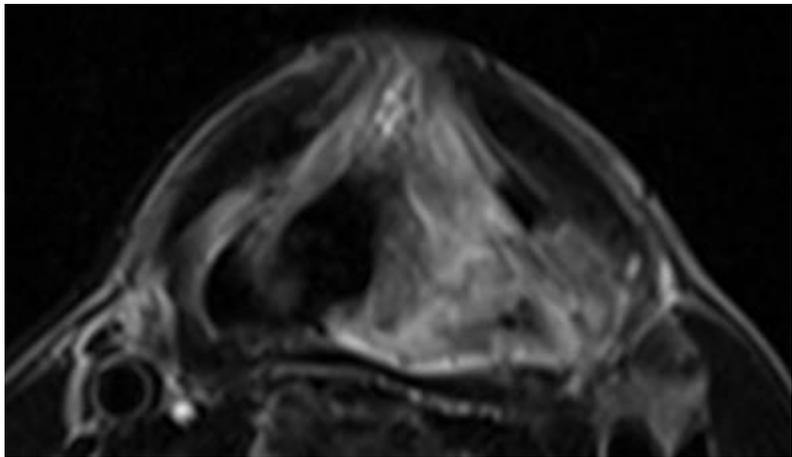

T1: Tu infiltrates 1 „region“ of hypopharynx is \leq 2cm in maximal extension

T2 : Tu infiltrates $>$ 1 „region“ of hypopharynx &/or adjacent region, 2-4cm \emptyset , no laryngeal fixation

T3: Tu $>$ 4cm maximal extension or laryngeal fixation

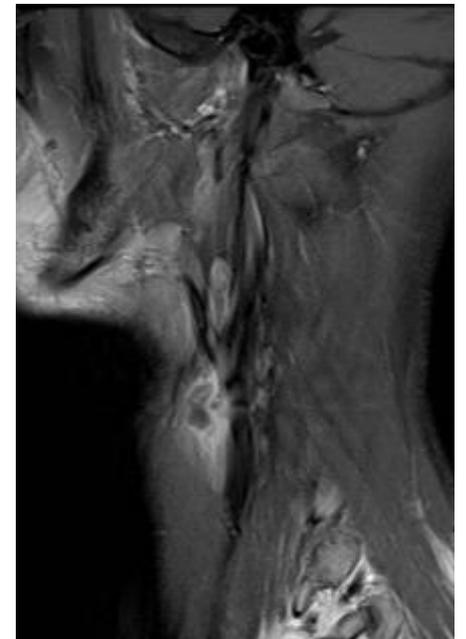

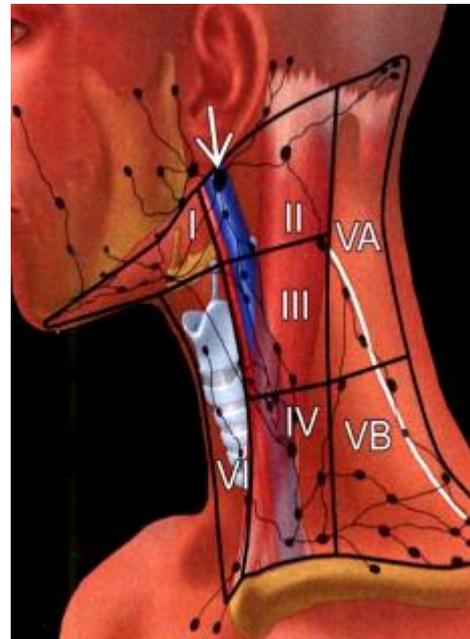

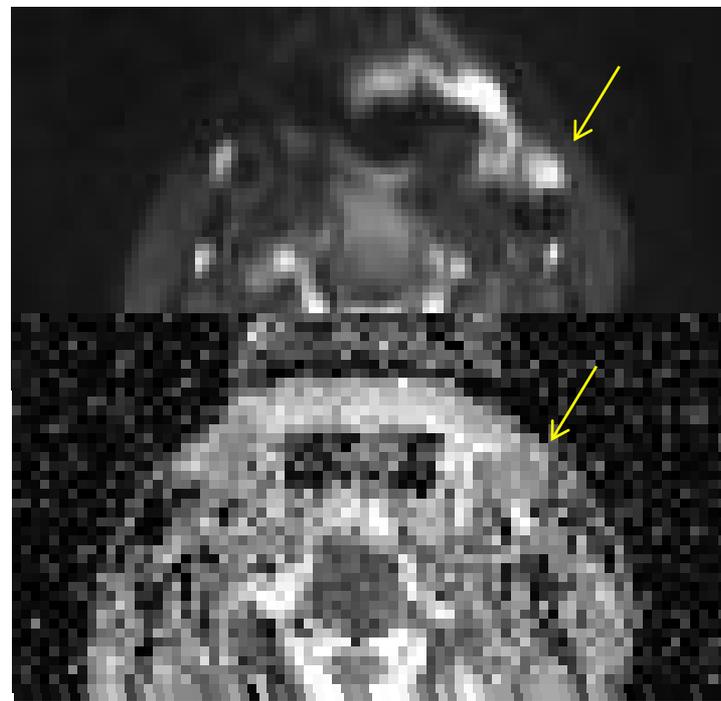

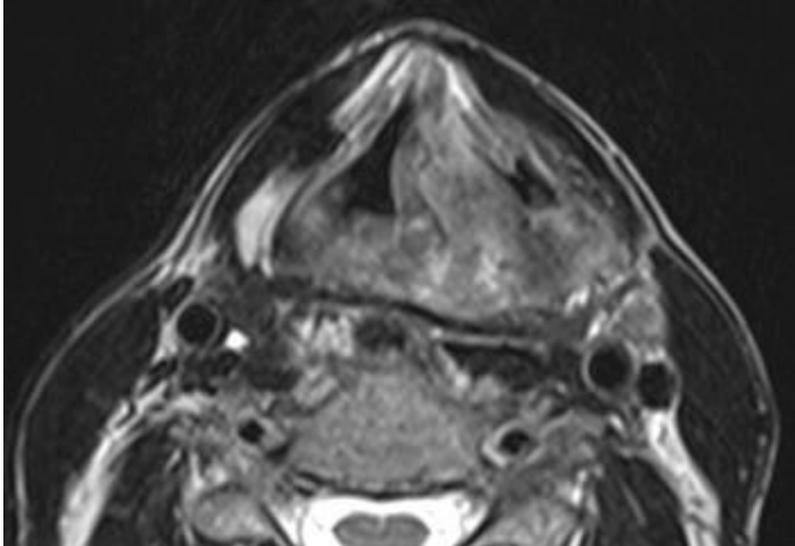

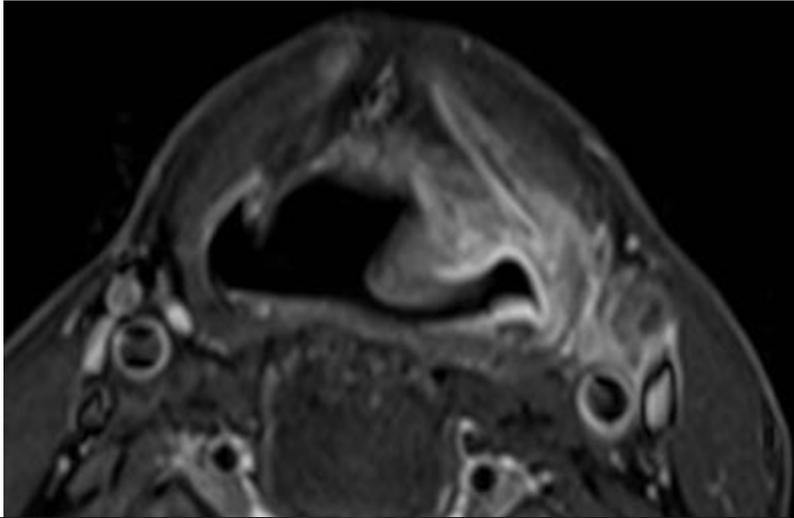

T4a: Tu infiltrates thyroid-, cricoid cartilage, hyoid, thyroid, esophagus, or soft tissues

T4b: Tu infiltrates prevertebral fascia, encases ICA, infiltrates mediastinum

In mets

Level III

parotid-Space

tumours

- benign: pleomorphic adenoma, cystadenolymphoma (Whartin), oncocytoma, schwannoma of the facial nerve, lipoma...
- malignant: ACC, mucoepidermoid-, acinus cell-, salivary duct carcinoma, adenocarcinoma, Ca ex pleomorphic adenoma, MASC, NHL

In mets: SCC , melanoma, NHL

parotid gland
